

Company Overview

Adaptimmune is a leader in TCR T-cell therapy, focused on developing novel cancer immunotherapy products. We utilize the body's own machinery – the T-cell – to target and destroy cancer cells by increasing the affinity of naturally occurring T-cell receptors (TCRs). We have developed a proprietary T-cell receptor platform that enables us to identify cancer targets, find and genetically engineer T-cell receptors, or TCRs, and produce TCR therapeutic candidates called SPEAR (Specific Peptide Enhanced Affinity Receptor) T-cells that recognize these targets on cancer cells. We engineer a patient's own T-cells to express our SPEAR TCRs to target and potentially destroy tumors.

Our wholly-owned pipeline includes SPEAR T-cell therapies targeting ADP-A2M10 (MAGE-A10), ADP-A2M4 (MAGE-A4), and ADP-A2AFP (AFP), which are being investigated in clinical studies across multiple solid tumor indications. We continue to build a pipeline of further proprietary TCR therapeutic candidates, next-generation treatment options, as well as allogeneic (off-the-shelf) solutions.

We believe our approach will lead to SPEAR T-cells with the potential to significantly impact cancer treatment and the clinical outcomes of cancer patients.

Adaptimmune Announces Clinical Responses across Five Solid Tumor Indications with an Overall Response Rate of 36% and Promising Early Durability from its Next-Generation SURPASS Trial
