# Ondas Networks Receives Purchase Order from Second North American Class 1 Railroad Customer

**The Company expands its work with Class 1 Railroad customers piloting its FullMAX SDR technology**

SUNNYVALE, Calif., Jan. 09, 2020 (GLOBE NEWSWIRE) -- [Ondas Holdings Inc.](#) (OTCQB: **ONDS**), through its wholly owned subsidiary, [Ondas Networks Inc.](#), a developer of private licensed wireless data networks for mission-critical industrial markets, announced today the receipt and fulfillment of a purchase order in December 2019 from a North American Class 1 railroad for the deployment of its FullMAX software-defined radio (SDR) technology in the 900 MHz licensed frequency band.

This purchase order is the second significant engagement with a leading Class 1 rail operator for Ondas Networks, following the completed deployment of a multi-phase field trial with another major [Class 1 Railroad](#) in Q4 of 2019. That field trial is being performed over multiple locations and is producing significant improvements to frequency utilization of existing licensed spectrum using Ondas Networks' IEEE 802.16s standard compliant radio platform for communications across challenging terrain.

The Class 1 Railroads are planning significant data communication upgrades over the next few years in order to meet an exponential growth in demand for capacity, along with the need for increased reliability and security. Ondas Networks' FullMAX technology addresses all of these requirements in a cost-effective way, providing significant value to rail operations.

Current Class 1 rail communications networks are designed around specific applications implemented in single licensed frequency bands. Ondas Networks' frequency agnostic FullMAX SDR solution enables the railroads to deploy mission critical mobile and wayside applications over multiple frequency bands, creating an opportunity to consolidate networks over a standardized platform.

"The Class 1 railroads we are now working with are excited about the opportunity to upgrade their network to a standards-based platform, one which optimizes their current bandwidth requirements and future-proofs their next generation networks," said Eric Brock, CEO of Ondas Networks. "We look forward to deploying this pilot program in early 2020 and continuing to expand our relationship with this blue-chip customer and others in the sector facing network challenges. We expect the Class 1 railroads to engage with Ondas beyond the 900 MHz band in the coming months as we demonstrate the benefits of a single, flexible SDR architecture, capable of covering the entire spectrum of frequencies in which the Class 1 railroads operate."

**About Ondas Holdings Inc.**

Ondas Holdings Inc., through its wholly owned subsidiary, Ondas Networks Inc., is a developer of private licensed wireless data networks for mission-critical industrial markets. The Company designs and manufactures its multi-patented, Software Defined Radio (SDR) platform for Mission Critical IoT (MC-IoT) applications. Ondas Networks' customer end markets include utilities, oil and gas, transportation, and government entities whose demands span a wide range of mission critical applications that require secure communications over large and diverse geographical areas, many of which are within challenging radio frequency environments. Customers use the Company's SDR technology to deploy their own private licensed broadband wireless networks. The Company also offers mission-critical entities the option of a managed network service. Ondas Networks' SDR technology supports IEEE 802.16s, the new worldwide standard for private licensed wide area industrial networks.
