Quantum Reorganizes Engineering Division with General Managers Leading Primary and Secondary Storage Businesses

New Leadership to Help Drive Company's Organic and Inorganic Growth

SAN JOSE, Calif., April 7, 2020 /PRNewswire/ -- Quantum Corp. (NASDAQ: QMCO) today announced a reorganization of its engineering division, establishing two general manager positions with P&L responsibility to lead the company's primary and secondary storage product lines, and adding a key executive role. The positions will enable Quantum to expand its leadership in storing video and other unstructured data, as well as build on its strengths in archive and data protection. The reorganization supports Quantum's goals to grow both organically and via strategic acquisitions, and to extend its business model with recurring revenue streams as organizations shift to options such as storage-as-a-service.

Vice President and General Manager, Primary Storage – Ed Fiore

Ed Fiore previously served as co-founder and CEO of Atavium, a private data storage software company focused on bringing business intelligence to storage. Atavium's metadata-rich file system combines real-time search and analytics with a data orchestration engine to provide workflow automation, hybrid multi-cloud collaboration, and policy-based data placement. As GM of primary storage Fiore will continue to develop source code and intellectual property that Quantum acquired from Atavium, advancing StorNext developments to address customer needs for media library software, real-time search and analytics, a hybrid multi-cloud experience, and ease of use. Prior to Atavium, Fiore served as vice president of Storage Engineering for Dell where he was responsible for the Compellent, EqualLogic, and FluidFS engineering teams.

Also joining Quantum as a Technical Director on the Primary Storage team is Mark Bakke, an industry veteran who was one of the co-founders of Atavium. Bakke is widely respected for his contributions to next-generation, high-speed storage networking innovation - including the market's first virtual switch and first iSCSI products - and will drive efforts developing enterprise-wide networking capabilities that are essential for emerging cloud solutions.

Vice President and General Manager, Secondary Storage – Bruno Hald

Bruno Hald is a seasoned engineering leader who has been with Quantum for over 25 years and currently leads the engineering teams for the archive and data protection product portfolio. Throughout his career, Hald has helped develop and launch many successful

storage platforms that generated significant revenues for Quantum. In this new role he will leverage his extensive experience with hyperscale customers, large enterprises and big OEM accounts to help customers address their needs in the secondary storage space.

"With our new corporate structure in place Quantum is better able to help our customers who are seeking agile partners and more flexible solutions such as storage-as-a-service offerings that can enable them to weather today's rapidly-shifting business climate," said Jamie Lerner, President and CEO of Quantum. "It's noteworthy that with the work we've done to rationalize our cost structure, we're able to elevate our talent while decreasing operational expenses. Ed Fiore and Mark Bakke provide the startup caliber talent that is essential to our primary storage portfolio as we transition to delivering more software-defined solutions. I'm also thrilled to promote Bruno Hald to a new role that will enable us to focus on the unique requirements of archive and data protection customers who depend on Quantum."
