# Trevena, Inc. Announces Presentations of OLINVYK™ Health Economic Models at AMCP 2021 Annual Meeting

--

*Models demonstrate substantial overall cost savings for hospitals when using OLINVYK compared to IV morphine in postoperative care*

--

CHESTERBROOK, Pa., April 15, 2021 (GLOBE NEWSWIRE) -- **Trevena, Inc. (Nasdaq: TRVN)**, a biopharmaceutical company focused on the development and commercialization of novel medicines for patients with central nervous system (CNS) disorders, today announced two poster presentations at the AMCP 2021 Annual Meeting. The conference was held virtually from April 13<sup>th</sup> to 14<sup>th</sup>, 2021.

The posters highlight two health economic models developed for OLINVYK (oliceridine) injection, which estimate the budget impact of OLINVYK compared to IV morphine when used on-demand in a hospital setting for postoperative pain. A “Base Case” model assumes a broad patient population. A “High Risk” model limits the population to patients who are both elderly ( $\geq 65$  years old) and obese ( $\text{BMI} \geq 30 \text{ kg/m}^2$ ), part of the Company’s initial core focus for launch. Both models were developed using AE incidence rates from the OLINVYK Phase 3 program and AE cost estimates from the published literature and claims data as referenced in the posters.

“Publishing these health economic models is the latest accomplishment in our ongoing launch of OLINVYK,” said Mark Demitrack, M.D., Senior Vice President and Chief Medical Officer of Trevena, Inc. “These models form a critical component of the comprehensive product dossier for OLINVYK, and I am pleased to have this opportunity to share these compelling cost offset findings with key hospital stakeholders.”

One of the posters, “Budget Impact Analysis for Oliceridine in the Management of Moderate-to Severe Acute Postoperative Pain,” was selected by the conference for a Gold Ribbon. This designation was awarded based on the same criteria used by *Journal of Managed Care & Specialty Pharmacy* to evaluate manuscripts and was only given to 20% of all submitted abstracts.

## Poster Details

1. **Base Case Model:** “Budget Impact Analysis for Oliceridine in the Management of Moderate-to Severe Acute Postoperative Pain” (Poster #U12)

- OLINVYK is associated with a ~\$230,000 decrease in total cost of care per 1,000 patients compared to IV morphine.
  - These cost savings are due to reduced AEs for OLINVYK-treated patients, as observed in the Phase 3 pivotal trials, and using a conservative, low-end estimate of AE costs based on government and published literature sources.
2. **High Risk Model:** “Cost Effectiveness Analysis of Oliceridine Compared with Morphine in The Management of Postoperative Moderate to Severe Acute Pain in a High Risk Population” (Poster #U18)
- OLINVYK is associated with savings of ~\$364,000 in total cost of care per 1,000 patients, due to reduced AEs compared to IV morphine. The model estimates that the total cost of care associated with IV morphine would exceed \$1.25M per 1,000 patients.

All posters can be found at <https://www.trevena.com/publications>. While the cost savings in these health economic models cannot be guaranteed, they are based on generally accepted methodology, and pharmacy and therapeutics committees typically review health economic models when making drug formulary decisions.

### **About OLINVYK™ (oliceridine) injection**

OLINVYK is a new chemical entity approved by the FDA in August 2020. OLINVYK contains oliceridine, a Schedule II controlled substance with a high potential for abuse similar to other opioids. It is indicated in adults for the management of acute pain severe enough to require an intravenous opioid analgesic and for whom alternative treatments are inadequate. OLINVYK is available in 1 mg/1 mL and 2 mg/2 mL single-dose vials, and a 30 mg/30 mL single-patient-use vial for patient-controlled analgesia (PCA). Approved PCA doses are 0.35 mg and 0.5 mg and doses greater than 3 mg should not be administered. The cumulative daily dose should not exceed 27 mg. Please see Important Safety Information, including the BOXED WARNING, and full prescribing information at [www.OLINVYK.com](http://www.OLINVYK.com).

### **About Trevena**

Trevena, Inc. is a biopharmaceutical company focused on the development and commercialization of innovative medicines for patients with CNS disorders. The Company has one approved product in the United States, OLINVYK™ (oliceridine) injection, indicated in adults for the management of acute pain severe enough to require an intravenous opioid analgesic and for whom alternative treatments are inadequate. The Company’s novel pipeline is based on Nobel Prize winning research and includes four differentiated investigational drug candidates: TRV250 for the acute treatment of migraine, TRV734 for maintenance treatment of opioid use disorder, TRV045 for epilepsy and chronic neuropathic pain, and TRV027 for acute respiratory distress syndrome and abnormal blood clotting in COVID-19 patients.

### **Forward-Looking Statements**

Any statements in this press release about future expectations, plans and prospects for the Company, including statements about the Company's strategy, future operations, clinical development and trials of its therapeutic candidates, plans for potential future product candidates, commercialization of approved drug products and other statements containing the words "anticipate," "believe," "estimate," "expect," "intend," "may," "might," "plan," "objective," "predict," "project," "suggest," "target," "potential," "will," "would," "could," "should," "continue," "ongoing," or the negative of these terms or similar expressions, constitute forward-looking statements within the meaning of The Private Securities Litigation Reform Act of 1995. Actual results may differ materially from those indicated by such forward-looking statements as a result of various important factors, including: the commercialization of any approved drug product, the status, timing, costs, results and interpretation of the Company's clinical trials or any future trials of any of the Company's investigational drug candidates; the uncertainties inherent in conducting clinical trials; expectations for regulatory interactions, submissions and approvals, including the Company's assessment of the discussions with the FDA or other regulatory agencies about any and all of its programs; uncertainties related to the commercialization of OLINVYK; available funding; uncertainties related to the Company's intellectual property; uncertainties related to the ongoing COVID-19 pandemic, other matters that could affect the availability or commercial potential of the Company's therapeutic candidates; and other factors discussed in the Risk Factors set forth in the Company's Annual Report on Form 10-K and Quarterly Reports on Form 10-Q filed with the Securities and Exchange Commission (SEC) and in other filings the Company makes with the SEC from time to time. In addition, the forward-looking statements included in this press release represent the Company's views only as of the date hereof. The Company anticipates that subsequent events and developments may cause the Company's views to change. However, while the Company may elect to update these forward-looking statements at some point in the future, it specifically disclaims any obligation to do so, except as may be required by law.
