Intel Appoints Tech Industry Leader Pat Gelsinger as New CEO

News Highlights:

- Bob Swan will remain in CEO role until February 15
- Intel expects to exceed its previously communicated guidance for fourth-quarter 2020 revenue and earnings per share (EPS). Full fourth-quarter results will be released Jan. 21, 2021, as scheduled.
- The company has made strong progress on its 7nm process technology and will provide an update on its Jan. 21 earnings call.

SANTA CLARA, Calif.--(BUSINESS WIRE)-- Intel today announced that its board of directors has appointed 40-year technology industry leader Pat Gelsinger as its new chief executive officer, effective Feb. 15, 2021. Gelsinger will also join the Intel board of directors upon assuming the role. He will succeed Bob Swan, who will remain CEO until Feb. 15.

Today's announcement is unrelated to Intel's 2020 financial performance. Intel expects its fourth-quarter 2020 revenue and EPS to exceed its prior guidance provided on Oct. 22, 2020. In addition, the company has made strong progress on its 7nm process technology and plans on providing an update when it reports its full fourth-quarter and full-year 2020 results as previously scheduled on Jan. 21, 2021.

Gelsinger is a highly respected CEO and industry veteran with more than four decades of technology and leadership experience, including 30 years at Intel where he began his career.

"Pat is a proven technology leader with a distinguished track record of innovation, talent development, and a deep knowledge of Intel. He will continue a values-based cultural leadership approach with a hyper focus on operational execution," said Omar Ishrak, independent chairman of the Intel board. "After careful consideration, the board concluded that now is the right time to make this leadership change to draw on Pat's technology and engineering expertise during this critical period of transformation at Intel. The board is confident that Pat, together with the rest of the leadership team, will ensure strong execution of Intel's strategy to build on its product leadership and take advantage of the significant opportunities ahead as it continues to transform from a CPU to a multi-architecture XPU

company.”

“I am thrilled to rejoin and lead Intel forward at this important time for the company, our industry and our nation,” said Gelsinger. “Having begun my career at Intel and learned at the feet of Grove, Noyce and Moore, it’s my privilege and honor to return in this leadership capacity. I have tremendous regard for the company’s rich history and powerful technologies that have created the world’s digital infrastructure. I believe Intel has significant potential to continue to reshape the future of technology and look forward to working with the incredibly talented global Intel team to accelerate innovation and create value for our customers and shareholders.”

“The board and I deeply appreciate Bob Swan for his leadership and significant contributions through this period of transformation for Intel,” continued Ishrak. “Under his leadership, Intel has made significant progress on its strategy to transform into a multi-architecture XPU company to capitalize on market shifts and extend Intel’s reach into fast-growing

markets. Bob has also been instrumental in reenergizing the company’s culture to drive better execution of our product and innovation roadmap. He leaves Intel in a strong strategic and financial position, and we thank him for his ongoing guidance as he works with Pat to ensure the leadership transition is seamless.”

“My goal over the past two years has been to position Intel for a new era of distributed intelligence, improving execution to strengthen our core CPU franchise and extending our reach to accelerate growth,” said Swan. “With significant progress made across those priorities, we’re now at the right juncture to make this transition to the next leader of Intel. I am fully supportive of the board’s selection of Pat and have great confidence that, under his leadership and the rest of the management team, Intel will continue to lead the market as one of the world’s most influential technology companies.”

Most recently, Gelsinger served as the CEO of VMware since 2012, where he significantly transformed the company into a recognized global leader in cloud infrastructure, enterprise mobility and cyber security, almost tripling the company’s annual revenues. Prior to joining VMware, Gelsinger was president and chief operating officer of EMC Information Infrastructure Products at EMC, overseeing engineering and operations for information storage, data computing, backup and recovery, RSA security and enterprise solutions. Before joining EMC, he spent 30 years at Intel, becoming the company’s first chief

technology officer and driving the creation of key industry technologies such as USB and Wi-Fi. He was the architect of the original 80486 processor, led 14 different microprocessor programs and played key roles in the Core and Xeon families.

About Intel

Intel (Nasdaq: INTC), is an industry leader, creating world-changing technology that enables global progress and enriches lives. Inspired by Moore's Law, we continuously work to advance the design and manufacturing of semiconductors to help address our customers' greatest challenges. By embedding intelligence in the cloud, network, edge and every kind of computing device, we unleash the potential of data to transform business and society for the better.
