Intel Editorial: Intel to Acquire Barefoot Networks, Accelerating Delivery of Ethernet-Based Fabrics

An Emerging Leader in Ethernet Switch Silicon for the Data Center, Barefoot Networks will Help Intel's Data Center Group Meet the Rapidly-Changing Needs of Hyperscale Cloud Customers

SANTA CLARA, Calif.--(BUSINESS WIRE)-- The following is an opinion editorial by Navin Shenoy of Intel Corporation.

Intel's customers operate in a world that is growing and transforming by leaps and bounds. We've [discussed previously](#) the amazing fact that over half of the world's data was generated in the past two years and only 2% of that data has been analyzed. Driven by that reality, we're always asking ourselves how we can better enable our customers to harness the potential of this data, by moving, storing and processing it with the speed and efficiency that they demand.

An essential part of the equation is providing data center interconnects that can keep pace with our customers' extraordinary and growing requirements. This is why interconnect is one of our [six technology pillars](#) in which we are investing to serve our customers.

With this in mind, Intel has signed an agreement to acquire Barefoot Networks, an emerging leader in Ethernet switch silicon and software for use in the data center, specializing in the programmability and flexibility necessary to meet the performance and ever-changing needs of the hyperscale cloud.

Upon close, the addition of Barefoot Networks will support our focus on end-to-end cloud networking and infrastructure leadership, and will allow Intel to continue to deliver on new workloads, experiences and capabilities for our data center customers.

Led by Dr. Craig Barratt and based in Santa Clara, California, the Barefoot Networks team is a great complement to our existing connectivity offerings. Barefoot Networks will add deep expertise in cloud network architectures, P4-programmable high-speed data paths, switch silicon development, P4 compilers, driver software, network telemetry and computational networking. Most important, this is one of the most talented and experienced teams in this domain in the industry. We look forward to welcoming Dr. Barratt and his team to the Intel family once the transaction closes, which is expected to be in the third quarter of 2019.

We look forward to serving Barefoot Networks' current customers, and to introducing its innovative programmable networking paradigm to more customers around the world.

[Navin Shenoy](#) is executive vice president and general manager of the Data Center Group at Intel Corporation.

About Intel

Intel (NASDAQ: INTC), a leader in the semiconductor industry, is shaping the data-centric future with computing and communications technology that is the foundation of the world's innovations. The company's engineering expertise is helping address the world's greatest challenges as well as helping secure, power and connect billions of devices and the infrastructure of the smart, connected world – from the cloud to the network to the edge and everything in between.
