Propanc Biopharma Makes Significant Progress with PCT Patent Application

MELBOURNE, AUSTRALIA -- (Marketwired) -- 06/09/17 -- [Propanc Biopharma Inc.](http://www.propancbiopharma.com)

(OTCQB: PPCB) ("Propanc Biopharma" or "the Company"), a clinical stage biopharmaceutical company focusing on development of new and proprietary treatments for cancer patients suffering from solid tumors such as pancreatic, ovarian and colorectal cancers, today announced significant progress with yet another Patent Cooperation Treaty (PCT) patent application within its intellectual property (IP) portfolio.

The Company received a Written Opinion from an International Search Authority regarding the novelty, inventive step and industrial applicability of the invention claimed in the recent PCT application, filed in April, 2017. The PCT application titled "Composition of Proenzymes for Cancer Treatment" is directed to a composition comprising trypsinogen and chymotrypsinogen, targeting specific weight ratios and certain dosage levels for the Company's lead product, PRP. The majority of claims were considered novel and a number of claims considered inventive, as determined by the Authorized Officer from the Australian Patent Office. Furthermore, it appears that the experimental data included in the application and the way it is presented adequately supports the pending claims. The PCT assists applicants in seeking patent protection internationally for their inventions and the Written Opinion can guide national patent offices with their patent granting decisions. By filing one international patent application under the PCT, applicants can simultaneously seek protection for an invention in over 150 countries.

"We continue to make significant progress with our IP portfolio and look forward to entering the national phase where we will seek to obtain jurisdiction in key countries and regions, globally," said James Nathanielsz, Propanc Biopharma's Chief Executive Officer. "We remain committed to further establishing ourselves as the lead player in a new and exciting field of oncology, using proenzymes as a means to halt progression of cancer from solid tumors. Hence, we continue to work hard along with our partner research organizations and scientific experts to explore new opportunities to expand our portfolio, and to also discover new treatments methods and compounds which even further enhances the effects of PRP."

The Company's lead product, PRP, is a solution for once daily intravenous administration of a combination of two pancreatic proenzymes trypsinogen and chymotrypsinogen. Currently progressing towards First-In-Human studies, PRP aims to prevent tumor recurrence and metastasis from solid tumors. Eighty percent of all cancers are solid tumors and metastasis is the main cause of patient death from cancer. According to the World Health Organization, 8.2 million people died from cancer in 2012. Consequently, a report by IMS Health states innovative therapies are driving the global oncology market to meet demand, which is expected to reach \$150 Billion by 2020. The Company's initial target patient populations are pancreatic, ovarian and colorectal cancers, representing a combined market segment of \$14 Billion predicted in 2020, by GBI Research.

About Propanc Biopharma:

Propanc Biopharma is a clinical stage biopharmaceutical company developing new cancer treatments initially for patients suffering from pancreatic, ovarian and colorectal cancers. We have developed a formulation of anti-cancer compounds, which exert a number of effects designed to control or prevent tumors from recurring and spreading throughout the body. Our products involve or employ pancreatic proenzymes, which are inactive precursors of enzymes. In the near term, we intend to target patients with limited remaining therapeutic options for the treatment of solid tumors. In future, we intend to develop our lead product to treat (i) early stage cancer and (ii) pre-cancerous diseases and (iii) as a preventative measure for patients at risk of developing cancer based on genetic screening. For more information, visit: www.propanc.com.

Forward-Looking Statements:

All statements other than statements of historical fact contained herein are "forward-looking statements" for purposes of federal and state securities laws. Forward-looking statements may include the words "may," "will," "estimate," "intend," "continue," "believe," "expect," "plan" or "anticipate" and other similar words. Although we believe that the expectations reflected in our forward-looking statements are reasonable, actual results could differ materially from those projected or assumed. Our future financial condition and results of operations, as well as any forward-looking statements, are subject to change and to inherent risks and uncertainties including those regarding our earnings, revenues and financial condition, our ability to implement our plans, strategies and objectives for future operations, our ability to execute on proposed new products, services or development thereof, our ability to establish and maintain the proprietary nature of our technology through the patent process, our ability to license from others patents and patent applications, if necessary, to develop certain products, our ability to implement our long range business plan for various applications of our technology, our ability to enter into agreements with any necessary manufacturing, marketing and/or distribution partners for purposes of commercialization, the results of our clinical research and development, competition in the industry in which we operate, overall market conditions, and any statements or assumptions underlying any of the foregoing. Other risks, uncertainties and factors that could cause actual results to differ materially from those projected may be described from time to time in reports we file with the Securities and Exchange Commission, including our reports on Forms 10-K, 10-Q and 8-K. We do not intend, and undertake no obligation, to update any forward-looking statement contained herein, except as required by law.
