Company Presentation

CyPath® Lung

Noninvasive, Accurate Lung Cancer Detection

Cautionary Note Regarding Forward-Looking Statements

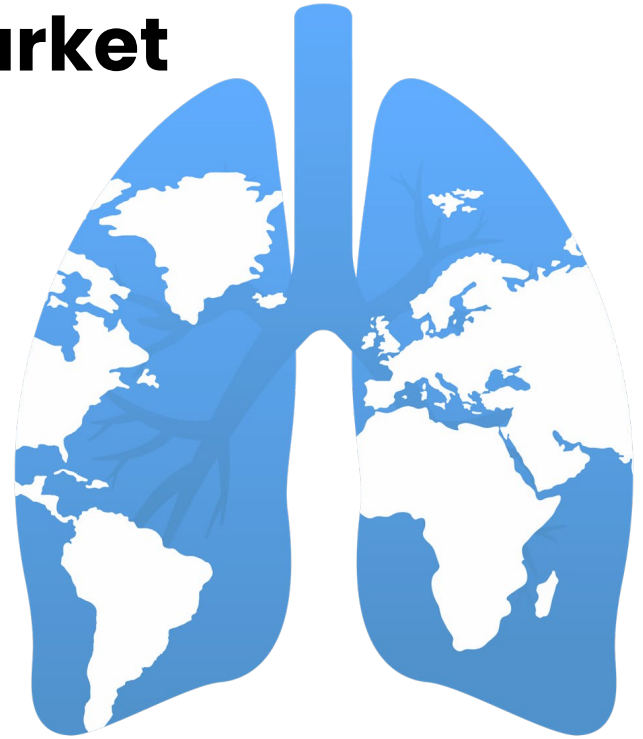
Certain statements in this presentation and statements by management or other persons acting by or on behalf of bioAffinity Technologies made in connection with this presentation constitute "forward-looking statements" within the meaning of the safe harbor provisions of the Private Securities Litigation Reform Act of 1995. Forward-looking statements are neither historical facts nor assurances of future performance. Because forward-looking statements relate to the future, they are inherently subject to significant known and unknown risks, uncertainties and other factors that are difficult to predict and are beyond the control of bioAffinity Technologies. The actual results, level of activity, performance or achievements of bioAffinity Technologies may be materially different from any future results, levels of activity, performance or achievements expressed or implied by these forward-looking statements.

Forward-looking statements generally are accompanied by words such as "believe," "may," "will," "estimate," "continue," "anticipate," "intend," "expect," "should," "would," "plan," "future," "outlook," and similar expressions that predict or indicate future events or trends. All statements that are not statements of historical matters are forward-looking statements.

The forward-looking statements made in this presentation are based on bioAffinity Technologies' current assumptions and judgments regarding future events and results. Actual events and circumstances are difficult or impossible to predict and will differ from assumptions. Many actual events and circumstances are beyond the control of bioAffinity Technologies. Some important factors that could cause actual results to differ materially from those in any forward-looking statements could include changes in domestic and foreign business, market, financial, political and legal conditions. These forward-looking statements are provided for illustrative purposes only and are not intended to serve as, and must not be relied upon as, a guarantee, an assurance, a prediction or a definitive statement of fact, probability or outcome and should be read in conjunction with statements that are included herein and elsewhere, including the risk factors included in bioAffinity Technologies' most recent Annual Report on Form 10-K, Quarterly Report on Form 10-Q and Current Reports on Form 8-K filed with the Securities and Exchange Commission. Except as required by law, bioAffinity Technologies undertakes no obligation to update any forward-looking statements, whether as a result of new information, future events or otherwise.

bioAffinity TECHNOLOGIES

Lung Cancer Is A Global Problem and Large Market



Most common cancer and leading cause of cancer-related deaths

- 2.48 million new cases of lung cancer worldwide in 2022, with 1.8 million deaths annually[1]
  - An estimated **19.3 million Americans** should have annual lung cancer screening, according to the American Cancer Society[2]
  - Up to ~**34 million people in the European Union** were at high risk for lung cancer in 2018[3]
  - **China reported 1,060,600 new cases** of lung cancer in 2022[4]

Lung cancer diagnostic market is ever increasing

- Estimated at **$20 billion in 2023** and projected to reach **$38 billion by 2034**
  - CAGR of 7.23% over 2025-2033[5]

bioAffinity TECHNOLOGIES

Early Detection of Lung Cancer Saves Lives

92% of Stage I patients survive 10 years if treated within 1 month of diagnosis[1]

Accurate, early cancer detection can lead to

- Curative treatment
- Long-term survival
- Improving the positive predictive value of screening

In 2025, less than **30%** of patients survived 5 years[2]

- Most patients are diagnosed with late-stage (Stages III-IV) when survival is much lower[2]

1. Survival of patients with stage I lung cancer detected on CT screening, NEJM, October 26, 2006, https://www.nejm.org/doi/full/10.1056/NEJMoa060476

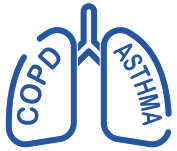
bioAffinity TECHNOLOGIES

Improving Lung Health by Tackling the Most Difficult Problem First: Detecting Lung Cancer with *Noninvasive* CyPath® Lung

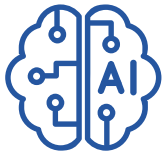


Growing Platform Technology

- Our commercial noninvasive lung cancer test is the **first in a pipeline** that includes development of companion diagnostics for asthma and chronic obstructive pulmonary disease (COPD)

92% Sensitivity[1] **87% Specificity[1]** **99% Negative Predictive Value[1]** **88% Accuracy[1]**

- CyPath® Lung has demonstrated **high sensitivity and specificity** in detecting lung cancer in people with small, indeterminate pulmonary nodules*



Proprietary AI Analysis of Flow Cytometry Data

- **AI-driven algorithm** analyzes complex flow cytometric data from patient sputum samples
- Profiles the lung microenvironment to differentiate between patients with or without lung cancer

Patient-friendly / Physician-focused

- **At-home collection** (no needles, no blood) with results 3 days after sample arrives at lab.

*Nodules detected by low-dose computed tomography. Test performance for patients with pulmonary nodules less than 20 mm also resulted in 88% accuracy, 95% Area Under the Curve; 95% Confidence Interval; 99% Negative Predictive Value, 44% Positive Predictive Value.

bioAffinity TECHNOLOGIES

CyPath® Lung in Action: Patient Case Studies*

Patient Case Studies Demonstrate CyPath® Lung Finds Cancer at Curative Stage 1A; Averts Risky Procedures

"**Gloria**" case: CyPath® Lung returned a "likely" malignancy result for a patient with **Stage 1A** mucinous adenocarcinoma later confirmed by biopsy. PET scan and serum markers were non-diagnostic. Patient is doing well after surgery.

"**Paula**" case: CyPath® Lung returned a "likely" result for a patient with a **Stage 1A** neuroendocrine tumor later confirmed by biopsy. Bronchoscopy and a non-diagnostic PET scan missed the cancer. These rare tumors can be difficult to diagnose. Patient is doing well after surgery.

"**James**" case: CyPath® Lung returned an "unlikely" result in an 85-year-old at high risk for lung cancer from heavy tobacco use and asbestos exposure. The result supported delaying invasive testing, sparing the patient a high-risk biopsy. The **pulmonary nodules resolved** on follow-up.

bioAffinity TECHNOLOGIES

CyPath® Lung in Action: Patient Case Studies*

Case Studies Demonstrate Cancer Detection In Surveillance Period; Earlier Detection of Malignant Ground Glass Nodule

"**Joan**" case: **Surveillance** in high-risk survivors is challenging. CyPath® Lung returned a "likely" result during monitoring after initial lung cancer treatment, leading to a confirming biopsy and treatment for a new second lung cancer.

"**Carol**" case: CyPath® Lung is a **useful tool after treatment** for lung and non-lung primary cancers. A "likely" result for a new pulmonary nodule discovered post-treatment for breast and lung cancer led to a mammogram, biopsy and treatment for recurrent breast cancer metastatic to the lung.

"**Helen**" case: CyPath® Lung returned a "likely" result for incidentally detected **ground glass nodules** with no suspicious characteristics on imaging. The result led to **early diagnosis** and treatment, avoiding 3-5 years of "watchful waiting."

bioAffinity TECHNOLOGIES

CyPath® Lung Compares Favorably to Standards of Care

Proven Clinical Utility To Help Detect Lung Cancer Noninvasively

Lung Cancer Diagnostic Procedure or Test	Sensitivity	Specificity
CyPath® Lung[1] (individuals at high risk with nodules <20mm)	**92%**	**87%**
FDG PET imaging[2] (individuals with suspicious lung nodules)	89%	75%
Bronchoscopy[3] (individuals with suspicious lung nodules)	88%	47%
Fine Needle Biopsy[4] (individuals with suspicious lung nodules)	90%	75%
Core Needle Biopsy[4] (individuals with suspicious lung nodules)	89%	89%

FDG=fluorodeoxyglucose; ;PET=positron emission tomography.

bioAffinity TECHNOLOGIES

CyPath® Lung

Significant Healthcare Savings

2024 study[1] authored by pulmonologists practicing at Audie L. Murphy Memorial VA Hospital and Brooke Army Medical Center evaluated CyPath® Lung's potential economic impact if added to the standard of care in 2022

Conclusion: Significant savings to individual patients and the overall healthcare system

$2,733 per Medicare patient for estimated annual savings of **~$370 million** to the healthcare system[1]

$6,460 per patient covered by commercial insurance for estimated annual savings of **~$895 million** to the healthcare system[1]

VA=US Department of Veterans Affairs.

bioAffinity TECHNOLOGIES

How the CyPath® Lung Test Works

Flow cytometry interrogates the lung microenvironment

- Sputum samples are processed into a single-cell suspension and labelled before data acquisition with antibodies, reagents, labeling agents and TCPP, a synthetic porphyrin taken up by cancer and cancer-related cells

Proprietary AI-driven platform analyzes sample for cancer

- Automated analysis identifies cell populations of interest and eliminates debris, dead cells, and cell aggregates to distinguish between likely cancer and benign conditions

Quality control assures the sample is from the lungs

- Fluorescent antibody specifically identifies lung macrophages to ensure the sample comes from the lungs

AI-driven analysis takes only minutes to identify lung cancer

- Analysis developed by machine learning detects cell populations indicative of lung cancer

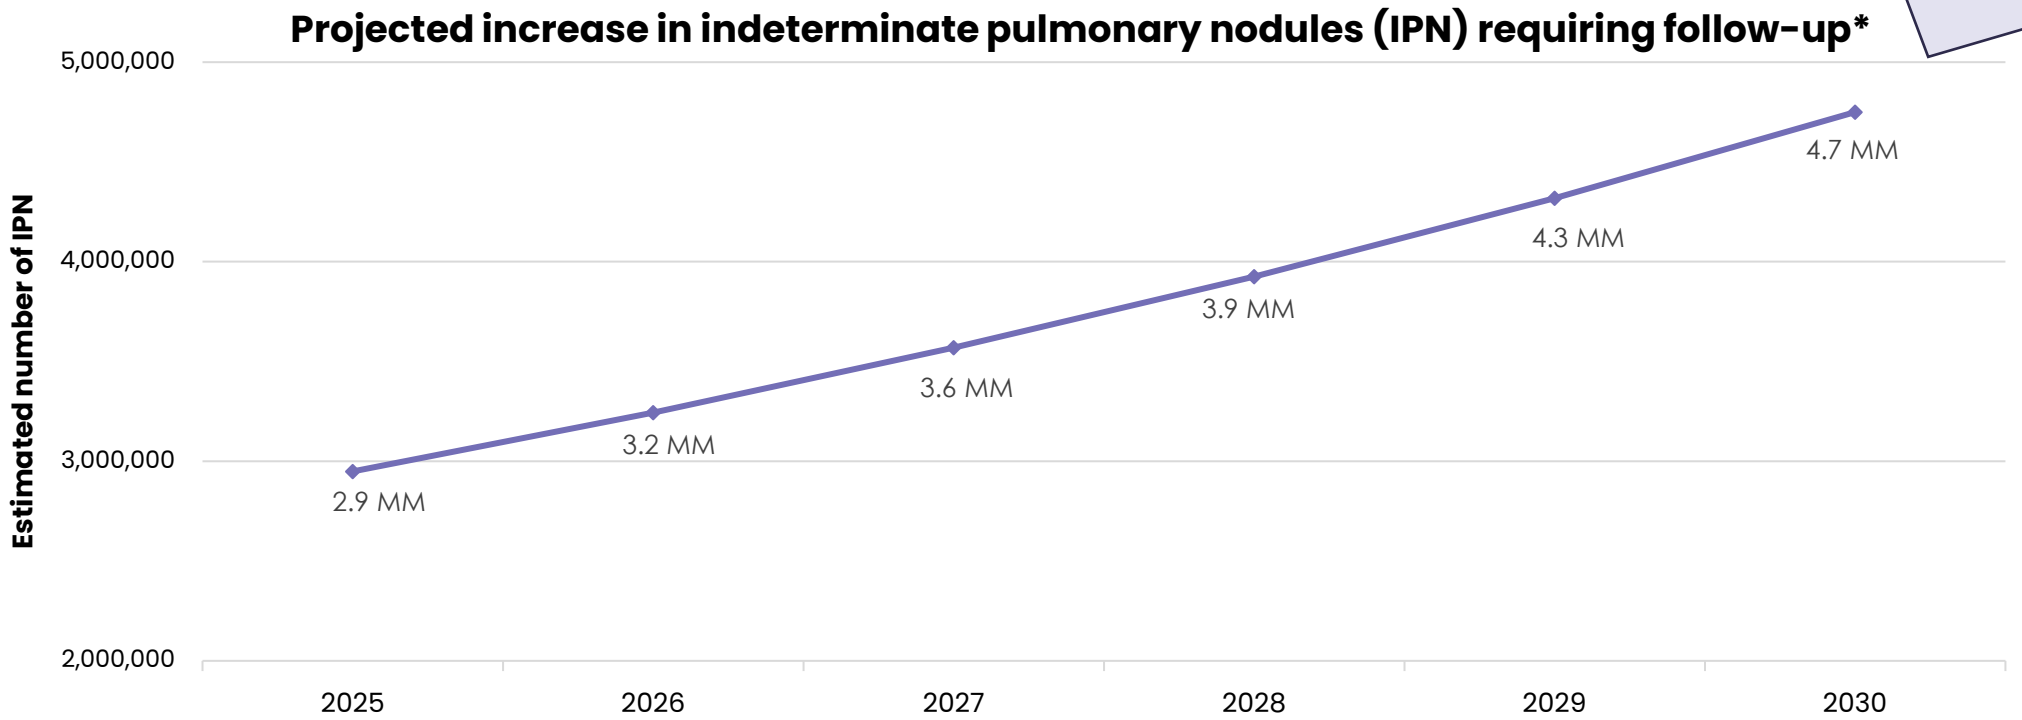
TCPP=tetra (4-carboxylphenyl) porphyrin.

bioAffinity TECHNOLOGIES

CyPath® Lung Market Opportunity

The U.S. Market for CyPath® Lung is poised for significant growth

10% 2030 Market Share = $470 MM



- The total number of indeterminate pulmonary nodules detected by lung cancer screening and incidentally by imaging for other conditions is projected to increase by 62% from 2.9 MM in 2025 to 4.7 MM in 2030*

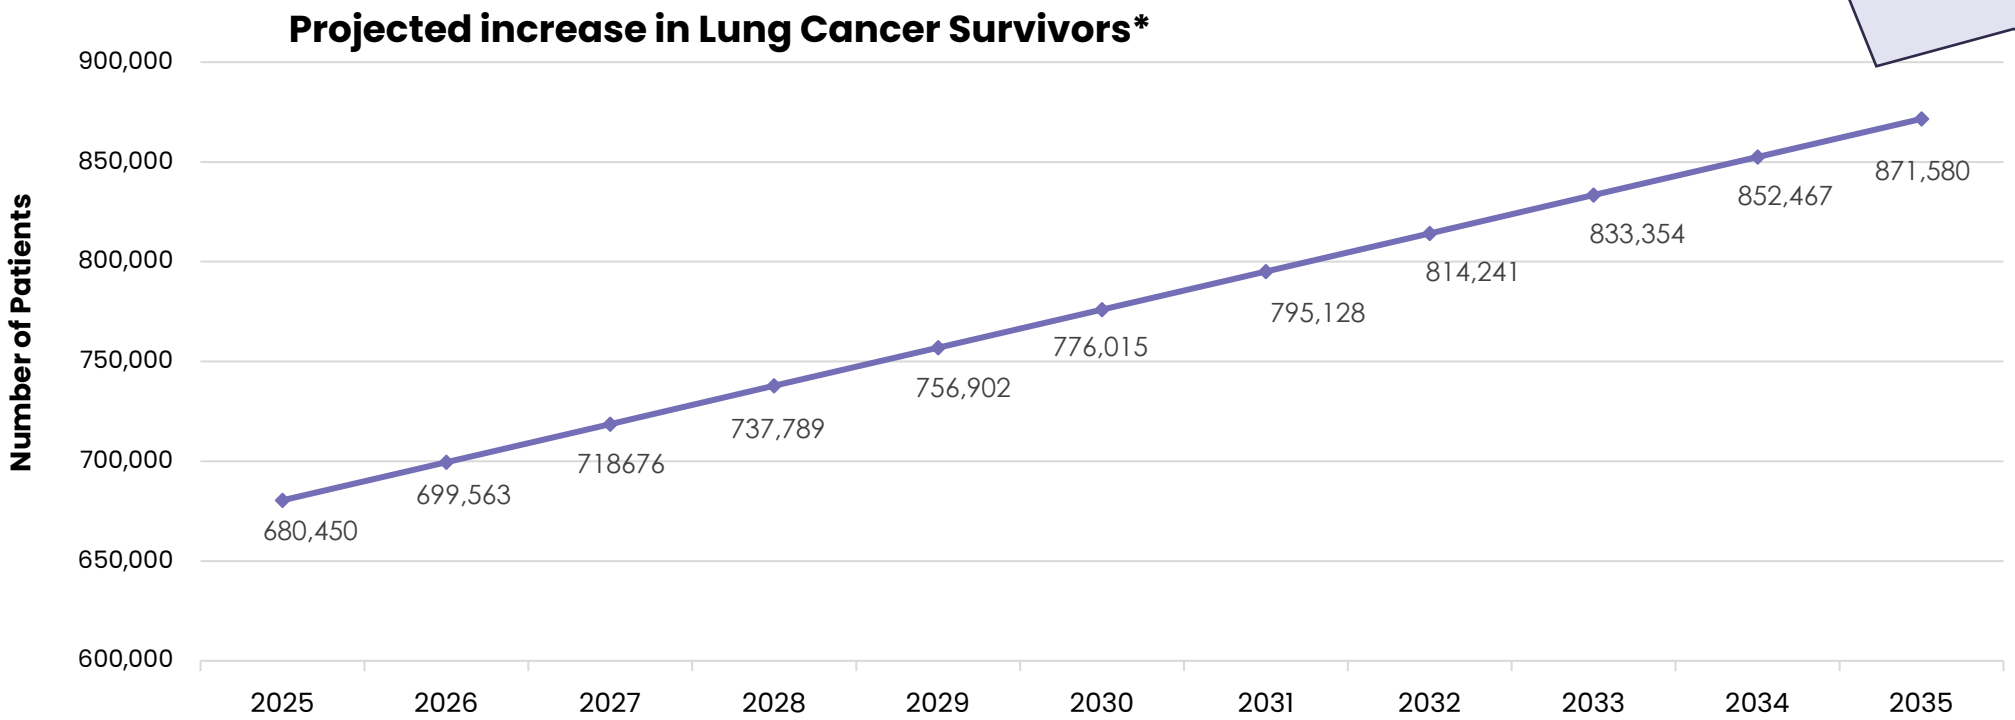
*Projection assumes 10% compound annual growth for the 2024-2030 period based on 1) utilization of LCS increasing from 18.1% in 2023 to close to 50% by 2030 due to growing adoption and awareness with improved access, and 2) improved ability to detect IPN in CT and x-ray through greater adherence to guideline recommendations and use of AI.

bioAffinity TECHNOLOGIES

CyPath® Lung Market Opportunity

10% 2030 Market Share = $7.76 MM

CyPath® Lung Use for Surveillance of Lung Cancer Recurrence



- The total number of people living with lung cancer is projected to increase by 28% from 680,450 survivors in 2025 to 871,580 in 2035*

*Wagel, et al. *Cancer treatment and survivorship statistics, 2025* CA Cancer J Clin. 2025 Sep 13;75(6):683.

bioAffinity TECHNOLOGIES

A Solid Foundation for Growth

Revenue Milestones Achieved in 2025

- 100% increase in CyPath® Lung year-over-year revenue and units sold[1]
- Published multiple case studies and physician testimonials on the human impact of CyPath® Lung
- Entered major VA medical centers with lung nodule programs
- Phased field expansion in strategic regional markets in Northeast and Southern US
- Expanded indications for use of CyPath® Lung for surveillance after treatment and detection of metastatic cancer to the lung

Jan '25 — Dec '25

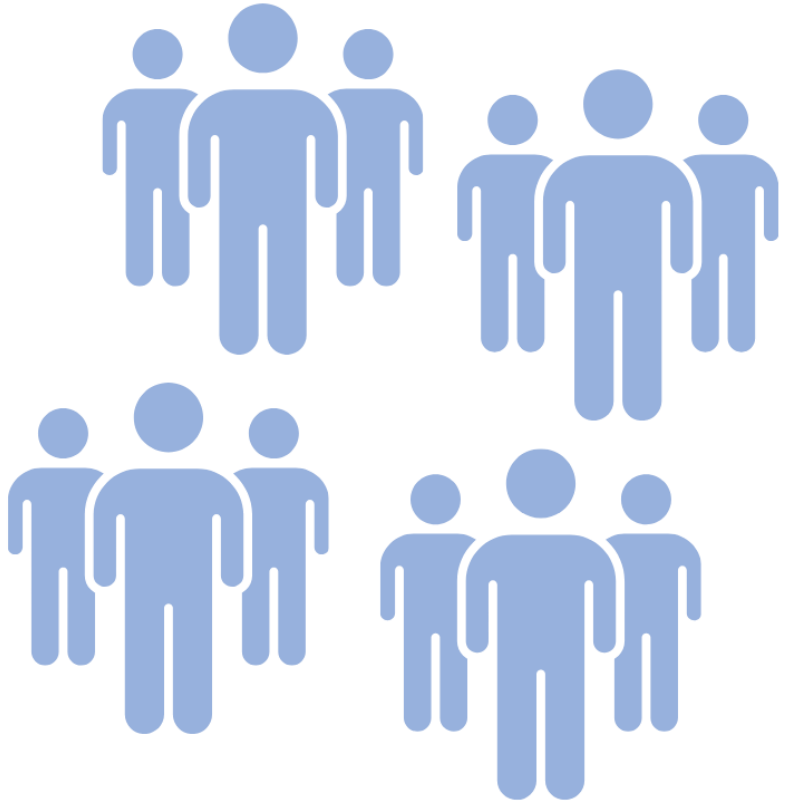
VA=US Department of Veterans Affairs.

1. Revenue growth figures are preliminary, unaudited, and subject to change.

bioAffinity TECHNOLOGIES

Longitudinal Clinical Trial Launches in 2026

- Longitudinal study supports inclusion of CyPath® Lung as part of the standard of care for pulmonary nodules
- Clinical study will evaluate CyPath® Lung performance to support risk stratification, clinical decision-making, detection and survivor surveillance
- 2000-patient longitudinal clinical trial with up to 20 collection sites including more than a dozen VA and military medical centers are qualified and ready
- Patient enrollment set to begin Q1 2026

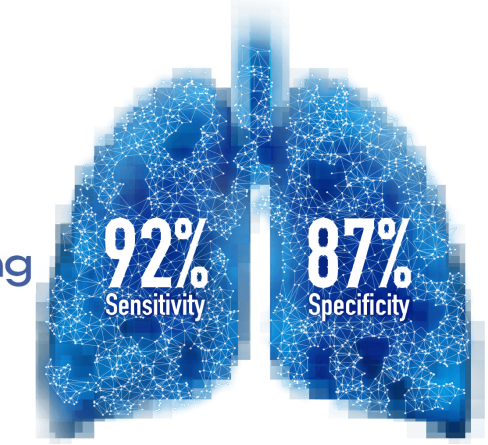


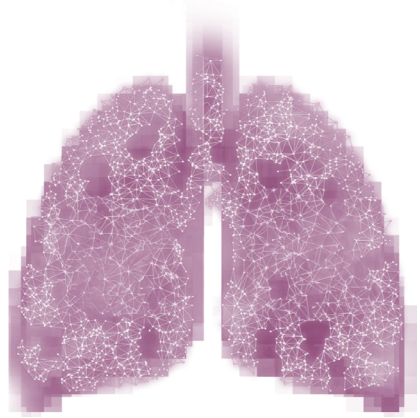
VA=US Department of Veterans Affairs.

Building on a successful diagnostic platform

Next in our pipeline: companion diagnostics for asthma and COPD

CyPath Lung





Quantifying lung inflammation for improved therapy

Precision diagnostics match patients to effective treatments and monitor their effectiveness

- Companion diagnostic test panel offers a 'scorecard' for lung inflammation
- Test indication expanded to support identification of patients best suited for specific therapies
- An estimated 23 million adults in the US[1] and 27 million people in the European Union[2] have been diagnosed with **asthma** and an estimated 14.2 million US adults have chronic obstructive pulmonary disease (**COPD**)[3]
- The global market for asthma and COPD therapeutics is estimated at $26 billion[4]

Management— Innovative, Experienced, Dedicated

Maria Zannes, JD
Founder, CEO & President

30+ years C-suite executive in medical and engineering fields building high-performing corporate teams who build shareholder value

Michael Edwards, MBA, CPA
CFO

30+ years in corporate finance including CFO at CytoBioscience and OncoVista Innovative Therapies

Gordon Downie, MD, PhD
Chief Medical Officer

30+ years in pulmonary medicine, clinical research, medical innovation, and interventional pulmonology; 30 peer-reviewed publications, worked extensively in both academic medicine and private practice.

William Bauta, PhD
Chief Science Officer

30+ years directing R&D of multiple drugs and diagnostics for oncology, neuroscience, and immunology at big pharma including Ilex and Genzyme

Xavier Reveles, MS, CG(ASCP)^{CM}
Chief Operating Officer

25+ years experience creating, building and managing CAP/CLIA labs and creating and commercializing LDTs; clinical cytogeneticist

Medical and Scientific Advisory Board

Neil Alexis, PhD
Principal Investigator, UNC School of Medicine; Environmental Medicine, Asthma & Lung Biology

Sandeep Bansal, MD, FCCP
Medical Director, The Lung Center and Interventional Pulmonology at Penn Highlands Healthcare

J. Scott Ferguson, MD
Professor of Medicine and Director of Interventional Pulmonology, University of Wisconsin School of Medicine and Public Health

Sheila Habib, MD
Director of Pulmonary Lung Nodule Clinic and the Lung Cancer Screening Program, South Texas VA

David Hill, MD
Chairman of the Board, American Lung Association; Assistant Professor, Yale School of Medicine

David Ost, MD, MPH
Chief of Pulmonary, Critical Care, and Sleep Medicine, University of Texas MD Anderson Cancer Center

Daniel Sterman, MD
Professor of Medicine and Chief of the Division of Pulmonary, Critical Care, and Sleep Medicine, NYU Langone Health

bioAffinity TECHNOLOGIES

Board of Directors

Decades of Successful Leadership from Start-Ups to Global Corporations

Steve Girgenti, Executive Chairman
Founded leading global healthcare marketing firm Healthworld with 32 offices worldwide; NASDAQ's 1999 "Entrepreneur of the Year"

Peter Knight, Director
Founding Partner of Generation Investment Mgmt. with >$18B AUM; Campaign Manager for President Clinton's '96 re-election campaign

John Oppenheimer, MD, Director
Clinical Professor of Medicine and Director of Clinical Research. Leading authority on asthma and COPD, participated in 180+ clinical trials, authored 260+ publications, and contributed to numerous national clinical guidelines.

Jamie Platt, PhD , Director
20+ years of diagnostic expertise, led successful M&A exits for two diagnostic companies totalling $1 Billion; Managing Director, CEO of Pictor Ltd.; Founder, CEO of BRIDGenomics

Roberto (Bobby) Rios, CPA, Director
40+ years of senior financial leadership in biotechnology, medical devices, and large-scale construction. Former CFO and board member for ILEX Oncology, BioMedical Enterprises, and Bartlett Cocke General Contractors,

Roby Joyce, MD, Director
Precision Pathology founder and Medical Director; board-certified in pathology, neurology; former chief of staff at Methodist Healthcare System; Colonel, US Army, ret.

Robert Anderson, Director
50+ years in healthcare executive positions at CIBA Pharmaceuticals, Becton Dickinson, Pfizer, Parke-Davis Division of Warner-Lambert, and Schering Plough

Maria Zannes, JD, Director, CEO
BIAF founder; former President of The Energy Recovery Council, The Zannes Firm, Senior Executive at ECOS Corp.
