MAXIMUS TIENET Software Receives Fourth Recognition as a Readers' Choice Top 100 Product of 2014 from District Administration Magazine

RESTON, Va.--(BUSINESS WIRE)-- MAXIMUS, a leading provider of government services worldwide, announced today that its TIENET® special education software has again been recognized by District Administration Magazine as part of the Readers' Choice Top 100 Products of 2014 Awards. District Administration Magazine covers emerging technologies, leadership issues and management strategies in the K-12 education industry. This is the fourth time the magazine's readers have recognized TIENET as one of the top online resources available to school districts.

TIENET offers three applications that can be used separately or as one coordinated system for Instructional Data Management, Response to Intervention Management and Special Education Case Management. TIENET delivers powerful features including customizability, interoperability, security and scalability by blending a solid, robust solution with leading edge technology. TIENET also provides exceptional functionality including guided workflow, support and staff development, translations, communication and integrated reporting to assist school systems. TIENET was recently selected by Pearson, the world's largest provider of educational software, as the special education module for its flagship product, PowerSchool.

"Our district implemented TIENET three years ago as a robust and scalable solution to capture Individual Education Plans for nearly 7,000 special needs students. We are capturing more information than ever before, providing us a means of making data-driven decisions to improve academic achievement. MAXIMUS is more like a partner to our district and their support has been top-notch," commented Marie Ochadleus, IT Records Management Supervisor for the Anchorage School District.

"We recognize that school districts and education professionals must manage their day-to-day processes efficiently, while also addressing students with special needs and meeting rigorous standards for student achievement," commented MAXIMUS President Bruce Caswell. "We are honored that these professionals find great value in our education software solutions, as we share the same goal of providing their special-need students with the best educational programs."
