**VF Corporation**  
**Restricted Substance List**  
**(RSL)**

**Supplier Policy**

Applicable to all products of  
VF Corporation or any of its subsidiaries

## Introduction

The Restricted Substance List (RSL) applies to all VF Products<sup>1</sup>, including but not limited to apparel, footwear, equipment, accessories and other products of value. The RSL also applies to all Raw Materials<sup>2</sup>, parts, trims, sundries, chemicals and other goods supplied or used in the manufacture of VF Products.

The RSL is an integral part of VF's quality and safety programs and must be shared with all vendors, suppliers and other players throughout the product supply chain.

Each supplier of VF Product or Raw Material represents and warrants that each of its materials (whether a VF Product or Raw Material) complies with all provisions of the RSL (including, but not limited to, the RSL prohibitions, restrictions and other requirements) and that the supplier agrees to indemnify and hold harmless VF Corporation and its subsidiaries and brands (collectively, "VF") from any claim, loss, damage or other detriment, resulting from any such supplier's non-compliance.

We require our suppliers and business partners to study this document carefully, implement management processes in their operations to comply with these requirements (including a verification process), and communicate the information to their internal teams and raw material suppliers.

We require each of our suppliers of VF Products or Raw Materials to certify their compliance to the 2026 VF Corporate RSL by executing the Supplier RSL Compliance Agreement (Section 1 of this document) and sending it to your respective VF sourcing manager.

Should you have any questions or concerns about this document, please do not hesitate to contact your VF corporate or brand contact person, one of the contact people listed in Appendix 1, or the general RSL mailbox for VF ([rsl@vfc.com](mailto:rsl@vfc.com)).

---

<sup>1</sup> VF Products encompass all raw materials, including all chemical substances, and all other goods, provided to VF or its suppliers or finishing contractors for use in the manufacture or assembly of any finished product manufactured for, labelled by, offered for sale by, sold by, or distributed by, VF or any of its subsidiaries. These include apparel, non-apparel, footwear, accessories, equipment and all other items sold by, for, or on behalf of VF Corporation or one of its subsidiaries.

<sup>2</sup> Raw Materials are defined by any material or intermediary material used in the manufacture of a VF Product. Examples of Raw Materials include fabrics (natural or synthetic), leather, plastic parts, metal parts, chemicals, paint, rope, string, buttons, zippers, snaps, or any other good used in the production of a VF Product.

## Section 1 VF Corporation 2026 RSL Compliance Agreement

VF Corporation and each of its subsidiaries, business units and brands (collectively, "VF") requires each supplier of VF Products or Raw Materials to confirm its understanding of the VF Restricted Substance List (RSL) by executing the following VF 2026 RSL Supplier Compliance Agreement. Each supplier of a VF Product or Raw Material represents and warrants that each of its materials complies with all provisions of the RSL (including, but not limited to, the RSL prohibitions, restrictions and other requirements) and that the supplier will indemnify and hold harmless VF from any claim, loss, damage or other detriment, resulting from any such supplier's non-compliance.

We require our suppliers and business partners to study this document carefully, implement management and verification (testing and auditing) processes in their operations to comply with these requirements, and communicate the information to their internal teams and raw material suppliers.

We require each of our suppliers of VF Products or Raw Materials to certify their compliance to the 2026 VF Corporate RSL by executing the Supplier RSL Compliance Agreement (Section 1 of this document) and sending the executed agreement to your respective VF sourcing manager.

The effective implementation date of this document is February 1st, 2026. All suppliers are required to fill out all info fields at the bottom part of the VF Corporation 2026 RSL Compliance Agreement (page 6).

# **VF Corporation 2026 RSL Supplier Compliance Agreement**

We understand that VF's Restricted Substance List program is an important aspect of the business of VF Corporation and its subsidiaries and brands (collectively, "VF") and adds significant value to VF's brands. Accordingly, we hereby declare and agree that:

- We have received, read, fully understand and will keep fully apprised of VF's Restricted Substance List, including its prohibitions, limitations and requirements, which may be amended from time to time, hereafter the "RSL";
- Compliance with the RSL is a condition to and incorporated in each and every order placed by VF or one of VF's subsidiaries or business units; each shipment constitutes our warranty that the materials, parts, chemicals and other goods shipped by us fully comply with the RSL;
- We understand and agree that every order VF gives us is in reliance on this agreement;
- We certify that each current and future material, part, chemical and other good, that we supply or otherwise deliver to VF meets, and will continue to meet, each prohibition, limitation and other requirement of the RSL;
- VF reserves the right, but not the obligation, to test, by the RSL-specified method, or other appropriate method, any ordered material, part, chemical and other good, at any time or stage of production;
- We agree to keep available for at least ten (10) years from the delivery date of any order to VF, all information concerning any substances we use in manufacturing VF's orders.
- Failure to comply with the RSL is a material breach of any agreement we have with VF, notwithstanding any other term of that agreement;
- We do and will continue to hold VF, its agents and its employees harmless against, and will defend and indemnify VF, its agents and its employees against, any and all claims, losses, liabilities, expenses, and damages, including reasonable attorney's fees and costs, caused by our failure to comply with any prohibition, limitation or other requirement of the RSL or this Agreement.
- Notwithstanding anything to the contrary, we agree and accept any and all terms, conditions, guidelines and/or instructions stipulated and given under VF's Restricted Substance List ("RSL") and VF's RSL Implementation Manual as well as any policies in connection with RSL that may be communicated by VF from time to time.

The undersigned is an owner, director, officer or managing agent, authorized to agree to and sign this Agreement on behalf of the company identified below.

## FOREWORD

For dated test methods, only the edition cited applies. For undated references, the latest edition of the referenced test methods (including any amendments) applies.

## Section 2 Substances Which May Be Found in Some Products

This section lists the substances which may be found in VF Products and are of primary focus for VF Corporation and its subsidiaries (collectively referred to herein as "VF"). The substances, limit values and test methods listed in Section 2 shall be diligently studied and understood by each supplier of a VF Product or Raw Material. Each supplier must develop a management system to ensure all materials produced meet each requirement of this Section.

This section contains limitation on the following groups of substances or substance restrictions based on product type:

- Aromatic Amines from Azo Dyes
- Alkyl Phenols and Alkyl Phenol Ethoxylates (APs and APEOs)
- Bisphenols
- Chlorinated Aromatics
- Chlorinated Paraffins
- Dimethylfumarate
- Disperse Dyes and Other Dyes
- Formaldehyde
- Metals
- Monomers
- Flame Retardants
- Nitrosamines
- Organotin Compounds
- PFAS
- Phthalates
- Polycyclic Aromatic Hydrocarbons (PAH)
- Preservatives for leather
- Siloxanes
- Solvents and Volatile Organic Compounds (VOCs)
- Others
- Restrictions on Packaging
- Electrical and Electronic Equipment
- Food Contact Materials
- Toys
- Phase-Out and Unintentionally Present Substances

## RECYCLED MATERIAL

Products manufactured with recycled material (fibers, polymers, down) must fulfil the requirements defined by the VF RSL. Vendors and suppliers have to set in place and agree with VF on an appropriate testing program to guarantee compliance on all production and batches of recycled material.

Specific exemptions might be granted by the existing legislation of the destination market and would derogate the limits set in the VF RSL. Contact the Global Product Stewardship team for further information.

## A. Aromatic Amines from Azo Dyes

2,6-Xylidine	87-62-7		
Aniline	62-53-3	Reporting requirement	

<sup>3</sup> The concentration limit is set for each substance as measured on the final product and represents the maximum allowable amount of the respective substance which is allowable in an RSL-compliant product. Any reference to the term "Usage Ban" indicates that the substance for which there is a usage ban is prohibited from use but that an acceptable trace amount is allowed up to the designated trace value ("TR"). Any reference to the term "Not Detected" indicates that the substance must not be detected in the final product.

<sup>4</sup> For analysis of 4-Aminoazobenzene, use test method ISO 14362-3 or GB/T 23344 for textiles and ISO 17234-2 for leather.

<sup>5</sup> The testing laboratory shall report all listed aromatic amines found between the 5 mg/kg reporting limit and the 20 mg/kg limit value in the final product. See Appendix 3: Reporting limits.

<sup>6</sup> 3,3'-dichlorobenzidine has been reported to be found when printing using a combination of Pigment Black 7 with either Pigment Orange 13 or Pigment Orange 34. This combination of pigments shall be avoided.

## A1. Aromatic Amines salts

<sup>10</sup> VF utilizes best efforts to track the existence of these Disperse Dyes in the Supply Chain. Doing so allows VF to employ a proactive approach for possible substitution, based on restrictions on use which are currently the subject of review in the context of ECHA Restrictions on Disperse Dyes. Suppliers are required to provide information on the use of these chemicals for the manufacture of VF products.

VF may review detection limits of these disperse dyes to decide on the potential need for corrective actions including but not limited to material and product disposition depending on amounts, product type, and intended usage.

<sup>16</sup> Toys, toy components and toy materials must be reviewed by VF brand-specific product safety team to determine all appropriate requirements. They are required to meet various chemical requirements and are also subject to pass strict mechanical and product safety testing.

<sup>17</sup> Chromium VI needs only to be tested for toys.

<sup>18</sup> Nickel release only needs to be tested for those parts that are in direct and prolonged contact with the skin. Check Appendix 2: Definitions.

<sup>19</sup> The same limit applies regardless of the test method used.

<sup>20</sup> Method EN 16128 is for those parts of spectacle frames and sunglasses intended to come in close and prolonged contact with the skin. VF accept as proof of conformity only test results based on the EN 12472 simulation of wear and subsequent migration test according to EN 16128. Results based on the EIS coating test won't be considered valid.

Other Flame Retardants <sup>25</sup>	Various	Reporting requirement	

<sup>24</sup> The testing laboratory shall report the presence of all other PBDE when testing for flame retardants.

<sup>25</sup> Each testing laboratory shall report to the VF Product Stewardship group any amount of any flame-retardant chemical detected in any raw material, including any chemical substance, or any other goods, intended for use in any VF product.

### K3. Flame Retardant Restrictions for upholstered furniture and juvenile products for residential use<sup>26,27</sup>

Chemical Substance	CAS Number	Limit Value Final Product (mg/kg)	Test Method
All flame retardants <sup>25</sup>	Various	Usage Ban. <sup>28</sup> [TR=5]	Solvent extraction / GC-MS or LC-MS  ISO 17881-1 ISO 17881-2

The design and bill of materials for each type of upholstered product and juvenile product intended to be manufactured, labelled, offered for sale, sold or distributed by VF, must be pre-approved by the Product Stewardship group (see Appendix 1) before any of these activities occur.

The VF Product Stewardship group approval process will include a screening program test to determine whether there is any flame-retardant present in the product which would result in a non-compliance with the applicable law.

The screening program test aims also to detect any chemical substance usage with a different primary function, but which may also act as flame retardant.

### L. N-Nitrosamines

Chemical Substance	CAS Number	Limit Value Final Product (mg/kg)	Test Method
N-Nitrosodimethylamine	62-75-9	Usage Ban [TR=0.5]	GB/T 24153 with LC-MS/MS verification if positive  ISO 19577

<sup>26</sup> Juvenile product means a children's product intended for residential use, including but not limited to a bassinet, booster seat, changing pad, floor play mat, highchair, highchair pad, infant bouncer, infant carrier, infant seat, infant swing, infant walker, nursing pad, nursing pillow, playpen side pad, play yard, portable hook-on chair, stroller and children's nap mat.

<sup>27</sup> Flame retardants are banned in upholstered furniture and juvenile products children which are placed into market in the City of San Francisco (Ordinance No. 211-17). All upholstered furniture must be affixed with a label that meets the requirements of Section 19094 of the Business and Professions Code, and states that the item does not contain flame retardant chemical(s).

<sup>28</sup> The intentional use of Flame Retardant is prohibited for upholstered furniture and juvenile products. Residual or trace concentrations may be found: contact the Product Stewardship for further action.

<sup>35</sup> Limit will change to 1 mg/kg from August 2029

## V. Packaging

In numerous jurisdictions where VF operates, VF must comply with various packaging requirements. All packages, packaging components and packaged retail-ready products supplied to VF Corporation or otherwise used in the delivery of VF Products shall be in compliance with the following packaging restrictions.

A signed RSL Compliance Agreement serves as the packaging supplier's certification and as the VF Product supplier's certification that associated packaging materials are in compliance with the VF packaging restrictions.

## X. Food Contact Materials

All food contact products and materials supplied to VF must comply with food contact requirements in the countries where the VF products are sold or marketed. Suppliers of products and materials intended for food contact applications agree to comply with applicable food contact regulations (such as in the US, EU or China).

The substances listed below represent additional restrictions.

## Z. Phase-Out and Unintentionally Present Substances

### Z1. Phase-Out of Polyvinyl Chloride (PVC)

VF prohibits PVC use in all newly developed products.

At this time, PVC use may be continued in limited legacy product lines. Exceptions may be provided by the VF Product Stewardship department for critical uses.

<sup>40</sup> Including but not limited to the list in section 2N.

## Section 4 Air and Gas Filled Products

Fluorinated greenhouse gases and ozone depleting substances are prohibited from use in the air space in all products. They must not be detectable when tested by GC-MS at a detection level of 0.1 mg/kg.

## Section 5   Liquid Filled Products

Products containing any liquid, gel or other liquid-type substance must meet the following restrictions:

1. Hazardous liquids shall not be used as the filling liquid in any liquid filled product.  
Hazardous liquids are those which are classified as toxic (acute or chronic), carcinogenic, reproductive toxic, flammable, explosive, irritants or sensitizers.
2. Bacteria growth must not occur. The following limits apply to the liquid of all liquid filled products.

Bacteria	Limit Value
Staphylococcus aureus	No contamination (<500 CFU/g or CFU/ml)
Escherichia coli (E-coli)	
Pseudomonas aeruginosa	
Salmonella	
All other bacteria	1,000 CFU/g or CFU/ml (total)

## Section 6 REACH–EU’s Regulation Concerning the Registration, Evaluation, Authorisation and Restriction of Chemicals

### **A. REACH–European Regulation No 1907/2006**

REACH is the comprehensive regulatory framework for chemicals (including consumer products) in the European Union (EU). It is intended to improve consumer safety and environmental protection while enhancing competitiveness, by improving knowledge and transparency along the value chains that involve chemicals.

REACH is regulated by the EU Regulation No 1907/2006. It is a European law applying to individuals, particular authorities and companies. Despite what many people think, REACH does not only apply on Substances, but also on Preparations and on Articles.

- **Substances** are defined as pure chemicals.
- **Preparations** are defined as mixtures of substances.
- **Articles** are defined by their geometrical form rather than the chemical/ physical properties of the substance.

There are specific provisions in REACH related to:

- **Substances** in Articles.
- **Intended Release** of Substances contained in Article.

The Basic Principle of REACH is that all chemical substances – pure, in preparations and/or in articles – are treated the same way. Import, usage and selling in Europe are only allowed for those substances for which adequate chemical information is available. **“No data, No Market!”**

### **B. Ownership and Key Elements of REACH**

The central part of the REACH administration is the European Chemical Agency (ECHA) located in Helsinki, Finland. The ECHA manages the Registration, Evaluation, Authorisation and the Restriction of the Chemical substances.

- **Registration** = any new substance placed on the EU market in excess of 1 ton/year.
- **Evaluation** = review of information submitted in the dossier of each registered substance.

Authorisation or Restriction procedures will be applied by the ECHA on those substances that are found to be particularly hazardous.

- **Authorisation** = allowing hazardous substances in strictly defined applications only. Outside the Registration process, EU member states may suggest candidate **Substances of Very High Concern (SVHC)** for authorisation or restriction by the ECHA (see also REACH Annex XIV and the Candidate SVHC list).
- **Restriction of Chemicals** = substances that are banned from their use in certain applications or restricted, having maximum limits (see also REACH Annex XVII).

## C. Obligations under REACH

A company's obligations under REACH depend strongly on its role in the value chain and its particular business setup. There are 4 basic roles, each having its own obligations.

**Manufacturers or Importers of Chemicals** are only allowed to market (pre-) registered substances in the EU. They must register any substances with the ECHA, as soon as they pass the 1 ton/year limit. They also have an information duty to their downstream users and customers. This involves providing them essential safety information under the form of completed Safety Data Sheets (SDS), applying CLP's practices and when applicable, communicating any content of SVHC above the 0.1% (w/w) in their chemicals.

**Formulators of Chemicals**, mixing substances to be marketed in the EU, need to make sure that every single one of the substances used are (pre-) registered with the ECHA by the Manufacturers or Importers. They are required to take adequate precautions when handling hazardous substances, to keep all the SDS updated and current and when their preparations do contain SVHC or candidate SVHC in a concentration above 0.1% (w/w), they also have an information duty towards their business customers, without being asked.

**Manufacturers or Importers of Articles, Brands** have the duty to inform their business customers in the EU if their articles contain (candidate) SVHC in levels above 0.1% (w/w). They are obliged to do this without being asked for such information. Towards the ECHA, there is an additional notification duty in those cases where those SVHC would exceed the value of 1 ton/year, via that particular article import. Towards individual end consumers, there is an obligation to respond within 45 days to questions on the presence of SVHC above the 0.1% (w/w) threshold level.

**Retailers** are also required to respond within 45 days to all questions from individual consumers on the presence of SVHC above the 0.1% (w/w) threshold value when being asked. If your supplier informed you that some of their products do contain more than 0.1% SVHC, you may also need to pass on the adequate safety information to the end consumer upon request.

The information above is by no means exhaustive and does not replace official or professional advice on this matter. More information on the above can be found on the regulation's section of the ECHA's website (<https://echa.europa.eu/home>).

## D. Substances of Very High Concern

Substances of Very High Concern (SVHC) are the most hazardous substances according to REACH. Article 57 of REACH states their criteria. All SVHC are proposed by either the European Commission or the EU Member states. The SVHC list is called the Candidate list, because from the moment onwards a substance is listed, it becomes a candidate for Authorisation.

Of particular note for REACH is the speed at which new substances may become listed as a SVHC. To ensure all products supplied to VF comply with REACH at the time of market, each supplier is obligated to track and monitor all SVHC in their supply chain and to keep up to date with official candidate list on the ECHA's website (<http://echa.europa.eu/web/guest/candidate-list-table>), where all regular updates are posted.

Suppliers shall map each step in their supply chains, including the sourcing and processing of raw materials, parts, chemicals and other product ingredients, in order to be able to immediately inform

VF of all cases where a substance listed in the candidate list is present in the article at or above a 0.1% concentration, by weight.

The VF Focus List highlights those SVHC from the official candidate lists that are not directly covered under Section 1 of the VF RSL and that are known to be used in textile applications and/or being linked – directly or indirectly - to the textile chemical industry. This list is intended to be an additional guideline for our suppliers and contractors, helping them to focus on those parts of their supply chains where some SVHC could possibly be encountered and where appropriate testing protocols could be relevant. The reduced number of SVHC in the focus list, do not exempt by any means the supply chain tracking and monitoring requirements needed for all not mentioned SVHC.

## Section 7 Biocides

Biocides are chemical substances that are used to suppress or control biological organisms such as mould and bacteria. Products are typically treated with biocides to preserve the product itself or to create a function such as odour control or insect repellency.

An article that has been treated<sup>49</sup> with or intentionally incorporates a biocidal product, with a view to protect its properties or function or extend its durability or shelf life is **an article having a Biocidal Property**. (*i.e. leather goods treated with fungicides to prevent mould or mildew or carpets treated with insecticides against moth damage*)

An article treated with a biocidal product, with the intention not to protect the article itself or its function, but to introduce an additional function which is biocidal, is considered to be **an article with a Primary Biocidal Function**. (*i.e. an insecticide impregnated bed net or anti-bacterial wipes*). Biocides and their permitted use are becoming increasingly regulated worldwide. Therefore, proficiency regarding which biocides are allowed for use in specific applications is needed.

<sup>49</sup> Ref. definition 'treated article' in Section 7 B.

## A. Biocide Product Regulation (BPR) – EU Regulation No. 528/2012

Biocides and biocide use are regulated in the European Union by the EU Biocide Product Regulation No. 528/2012. The full text of the BPR is available directly from the eur-lex platform.<sup>50</sup>

### A1. Scope of the BPR

The BPR applies to biocidal products and treated articles.

Biocidal products are only allowed on the EU market if they have been authorized under the BPR directive for the intended use.

### A2. Product Types (PT)

Biocides are divided into 4 main groups under the BPR, with each group subdivided into different Product Types, as listed below:

- **Group 1:** Disinfectants, PT 1 to PT 5
- **Group 2:** Preservatives, PT 6 to PT 13
- **Group 3:** Pest Control, PT 14 to PT 20
- **Group 4:** Other Biocidal Products, PT 21 to PT 22

The PT describes the application area of the biocide (as an example, preservatives used on wood are listed in Group 2, Preservatives, and in Product Type 8, Wood Preservatives).

Use of biocides on VF products shall conform to the EU BPR, permitting only authorized biocidal products for the intended function.

## B. Definitions within the BPR

Similar to REACH, the EU BPR applies to both Chemical Substances and Preparations and Articles. Important definitions within the BPR are below:

- **Articles** are defined by their geometrical form rather than the chemical/ physical properties of the substance.
- **Treated Article** means any substance, mixture or article which has been treated with, or intentionally incorporates one or more biocidal products.
- **Biocidal Products** are defined as:
  - any substance or mixture, in the form in which it is supplied to the user, consisting of, containing or generating one or more active substances, with the intention of destroying, deterring, rendering harmless, preventing the action of, or otherwise exerting a controlling effect on, any harmful organism by any means other than mere physical or mechanical action,
  - any substance or mixture, generated from substances or mixtures which do not themselves fall under the first indent, to be used with the intention of destroying, deterring, rendering harmless, preventing the action of, or otherwise exerting a controlling effect on, any harmful organism by any means other than mere physical or mechanical action.
  - a treated article that has a primary biocidal function

---

<sup>50</sup> <http://eur-lex.europa.eu/>

Under the BPR, when an article has been treated to create a primary biocidal function, that article shall be defined as a biocidal product for compliance to the BPR.

## C. Important aspects of the BPR

### C1. Rules for the use of treated articles

When determining the allowable biocide to create a specific function, only authorized substances listed in the BPR shall be used. Authorized substances include those listed in:

- the Approved Substances List<sup>51</sup>
- Annex I of the BPR
- the Review Program<sup>52</sup> and non-inclusion decisions

### C2. EU regulations for treated articles

"A treated article shall not be placed on the market unless all active substances contained in the biocidal products that it was treated with or incorporates are included in the list drawn up in accordance with Article 9(2) (*list of authorized substances*), for the relevant product-type and use, or in Annex I (*substances for simplified authorisation of the biocidal product*), and any conditions or restrictions specified therein are met"

### C3. Labelling requirement for treated articles

Treated articles containing a biocidal product require labelling if:

- a claim is made by the manufacturer of that treated article regarding the biocidal properties of the article, or
- in relation to the active substance(s) and the substance potential to contact humans or release into the environment, specific authorisations may require associated labelling.

#### Label requirements:

When required, the label shall provide the following information:

- a statement that the treated article incorporates biocidal products;
- where substantiated, the biocidal property attributed to the treated article;
- the name of all active substances contained in the biocidal products;
- the name of all nanomaterials contained in the biocidal products, followed by the word 'nano' in brackets; and
- any relevant instructions for use, including any precautions.<sup>53</sup>

<sup>52</sup> <https://echa.europa.eu/regulations/biocidal-products-regulation/approval-of-active-substances/existing-active-substance>

<sup>53</sup> It is advisable to check the Safety Data Sheet of the biocidal products used and to contact the chemical supplier for additional information and advice.

#### **C4. Information duty for treated articles**

Similar to REACH, the BPR obligates the treated product supplier to provide information to any consumer, upon request, within 45 days and free of charge, with information regarding the biocidal treatment of the treated article.

## E. US biocide regulation: Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA)

The full text of the regulation is available directly from the EPA website<sup>54</sup>.

The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) is the Federal statute that governs the registration, distribution, sale, and use of pesticides in the United States.

### E1. Scope of FIFRA

FIFRA enforcement is focused on the sale, distribution, and use (which can include disposal) of pesticides. Generally, before a pesticide may be sold or distributed in the United States, it must be registered with the EPA. Before, the applicant must show, among other things, that using the pesticide according to specifications "will not generally cause unreasonable adverse effects on the environment."

### E2. Antimicrobial products

Antimicrobial pesticides are substances or mixtures of substances used to destroy or suppress the growth of harmful microorganisms whether bacteria, viruses, or fungi on inanimate objects and surfaces.

Antimicrobial pesticide products are categorized as either "public health" or "non-public health", depending on the specific claims made on each product's labelling.

**Public health antimicrobial pesticide products** are those products that bear a claim to control pest microorganisms that pose a threat to human health, and whose presence cannot readily be observed by the user.

### E3. Exemption qualification of treated articles to the regulation

EPA published a Pesticide Registration Notice 2000-1 that specifies the exemption qualification of treated articles to the regulation. Treated articles with **Non-Public Health Claims** are exempted from registration, but a label with the non-public health claim must be provided.

As long as products don't make public health claims that extend beyond the protection of the article itself, they qualify for the treated articles exemption.<sup>55</sup>

To qualify for the treated articles exemption, both conditions stated below must be met.

1. the incorporated pesticide is registered for use in or on the article or substance, and;
2. the sole purpose of the treatment is to protect the article or substance itself.

If both are not met, the article or substance does not qualify for the exemption and is subject to regulation under FIFRA.

Examples of labelling claims, the Agency is likely to consider **Acceptable** under the exemption for **Odor Resistant Claims**:

- This product contains an antimicrobial agent to control odors.

---

<sup>54</sup> <https://www.epa.gov/laws-regulations/summary-federal-insecticide-fungicide-and-rodenticide-act>

<sup>55</sup> Treated Articles Exemption, section 152.25(a).

- This product contains an antimicrobial agent to prevent microorganisms from degrading the product.
- Resists Odors - This product has been treated to resist bacterial odors.
- Inhibits the growth of bacterial odors.
- Resists microbial odor development.
- Retards the growth and action of bacterial odors.
- Guards against the growth of odors from microbial causes.
- Guards against degradation from microorganisms.
- Reduces odors from microorganisms.
- Odor-resistant.
- Acts to mitigate the development of odors.

These examples, instead, represent examples of labelling claims that the Agency is likely to consider **Unacceptable** under the exemption for a treated article and that would lead to a requirement to register the article as a pesticide product;

- Antibacterial.
- Bactericidal.
- Germicidal.
- Kills pathogenic bacteria.
- Effective against E. coli and Staphylococcus.
- Provides a germ-resistant surface.
- Provides a bacteria-resistant surface.
- Surface kills common gram positive and negative bacteria.
- Surface controls both gram positive and negative bacteria.
- Surface minimizes the growth of both gram positive and negative bacteria.
- Reduces risk of cross-contamination from bacteria.
- Controls allergy causing microorganisms.

## Section 8 CPSIA - United States Consumer Product Safety Improvement Act

The Consumer Product Safety Improvement Act CPSIA of 2008 reauthorizes the Consumer Product Safety Commission (CPSC) and expands the Commission's role in ensuring the safety of all consumer products, but in particular, it imposes additional requirements to enhance the safety of products designed for children up to age 12 years.

VF has established programs and procedures to comply with CPSIA and other applicable legal requirements. These include product design requirements, manufacturing specifications, and product testing programs, among other procedures as mentioned in this Product Safety Manual. VF requires all product suppliers to deliver only products that comply with applicable legal requirements and specifications, including those listed in this manual. Compliance with CPSIA requires suppliers to maintain a reasonable product testing program, quality control systems, auditing, and product tracking procedures at every production lot level.

### **A. Scope**

CPSIA mandates testing for children's and adult products for which the CPSC has established a safety requirement. This includes but is not limited to testing for small parts (as per Title 16 CFR 1501), testing for sharp edges / points, flammability, etc.

For certain children's products, CPSIA also permanently bans eight phthalates (DEHP, DBP, BBP, DINP, DPENP, DHEXP, DCHP and DIBP). The RSL reflects these restrictions.

CPSIA mandates safety testing for every lot of products intended for children 12 years of age and younger. Suppliers are also required to label products with traceability information to allow tracking in case of a product recall.

### **B. Certifications**

A Children's Product Certificate (CPC) must be issued for Children's products manufactured overseas, and domestically covered by CPSC rules. A General Conformity Certificate (GCC) must be issued for every non-children's (general use) product covered by CPSC rules and manufactured in or imported into the United States. The GCC is not required for adult apparel when falls into one of the exemptions identified by CPSC. CPC / GCC must be issued by the importer or domestic (US) manufacturer, not the supplier. However, the importer of the product (VF or VF subsidiary, for example) must rely upon the supplier's product safety and compliance procedures, along with the supplier's product testing reports, to ensure that the product conforms to applicable requirements.

## Section 9 RSL Product Testing Guidance

Product testing requirements can be found in the VF brand specific product testing manuals. Tests specified in testing manuals are mandatory. VF Brands may also provide guidance on chemical management and RSL compliance relating to a specific VF brand.

Table 1 provides general guidance on product testing for various material types. The table is not intended to replace the mandatory VF brand specific testing requirements, however is meant to provide additional guidance to our suppliers to assist in their internal chemical management programs.

*Table 1 - General guidance on product testing*

VF currently maintains various product testing programs to validate RSL compliance. Notwithstanding VF's testing programs, the supplier shall be fully responsible for obtaining all necessary knowledge and information required to understand and execute business processes that ensure RSL compliance. The supplier is also responsible for performing analytical testing on products to verify the product's compliance to all RSL requirements.

<sup>58</sup> PVC material only.

<sup>59</sup> All foam materials need to be tested for flame retardants as specified in section 2, K2.

<sup>60</sup> Textile materials treated with flame retardant finishes need to be tested as specified in section 2, K1.

<sup>61</sup> Shoe sole materials, latex, rubber.

<sup>62</sup> EVA material only.

Products should be tested as prescribed in Table 1, which provides guidance regarding the most probable tests to conduct for a product type. However, nothing in the guidance below shall be construed to relieve a supplier from their duty to provide products compliant with the full RSL. In addition to the testing guidance provided in Table 1, VF may at any time request additional testing to validate product compliance with the RSL. All costs associated with product testing are the responsibility of the supplier.

## **Section 10 Chemical Information Log**

For a good in-house RSL management system, the manufacturer should understand if the materials or chemicals used in development or production contain any restricted substances. This information may be obtained from the material/chemical supplier.

It has been a common industrial practice for manufacturer to collect SDS (Safety Data Sheet) from chemical supplier for RSL compliance validation. However, the restricted substance information may not be listed in the SDS either because of the concentration of the substance, or, the quality of the SDS. To promote transparency and accurate information flow, a Chemical Information Log (CIL) has been developed.

The manufacturer should send this RSL to their material and chemical supplier, requesting them to provide only materials/chemicals that comply with the VF RSL. The chemical supplier should also complete and return the Chemical Information Log (CIL). The VF product manufacturer should collect the updated CIL for each preparation used in the manufacture of any VF product. Note: the CIL should be completed by the chemical supplier but not the VF product manufacturer.

The CIL includes 5 columns. The first column should be completed with the chemical trade name, as indicated on product packaging documents, SDS and label. For each preparation, the chemical supplier shall indicate whether such preparation contains a RSL substance.

When a preparation contains an RSL substance in a concentration that could cause a VF product to exceed corresponding RSL restrictions, the chemical supplier should indicate this by identifying the RSL substance and concentration on the CIL. The concentration indicated on the CIL must be the concentration of the RSL substance in the chemical preparation.

## Appendix 2: Definitions

**Accessories** – Products other than a standard shirt, shoe or pant. These may include both apparel and non-apparel products such as belts, caps, wallets, handbags, socks, eyewear, watches, and more. All accessories carrying a VF brand logo or manufactured for VF Corporation shall comply with the VF Restricted Substance List (RSL).

**AP** – Alkylphenols. For the scope of this RSL, limited to Nonylphenol (NP), Octylphenol (OP) and their isomers.

**APEO** – Alkylphenols ethoxylates. For the scope of this RSL, limited to Nonylphenol ethoxylate (NPEO) and Octylphenol ethoxylate (OPEO).

**Article** – An object which during production is given a special shape, surface or design which determines its function to a greater degree than does its chemical composition.

**Authorisation** – One of the pillars of the European REACH regulation, where producers and importers of hazardous chemicals require a special permission to place these chemicals on the European market.

**Battery Directive** – The Battery Directive cover all batteries and accumulators, if incorporated into appliances.

**Bioaccumulative** – Bioaccumulative is property causing the substances to build up (accumulate) in the body. Such substances build up in fat tissue in the body and cannot be excreted by the body.

**Can be placed in the mouth** – Article or part of an article which has at least one dimension less than 5 cm.

**Candidate List** – A list of substances meeting the criteria of Substances of Very High Concern as defined within REACH and proposed by either the European Commission or the EU Member states. These substances are candidates for Authorisation.

**Carcinogenic** – A carcinogenic substance causes cancer.

**Chemical Abstract Service (CAS) Number** – The CAS number is a unique number that identifies a particular chemical structure. While there may be various synonyms and different naming conventions for a chemical, there is only one CAS number. Mixtures of chemicals do not have CAS numbers; only individual chemical components have CAS numbers. When there is doubt about the chemical name used in the RSL, always check the CAS number.

**Childcare Articles** – Childcare articles shall mean any product intended to facilitate sleep, relaxation, hygiene, the feeding of children or sucking on the part of children.

**Children's Products** – Children's products are products designed or intended primarily for children 12 years of age or younger.

**CMR1 and CMR2** – Carcinogenic, Mutagenic and Repro-toxic chemicals, abbreviated as CMR chemicals, make up the first and most toxic category of the toxicity classes into which hazardous

chemicals can be subdivided, according to EU legislation. Carcinogenic chemicals can cause or promote cancers. Mutagenic chemicals can cause genetic mutations. Repro-toxic chemicals can damage the reproductive process.

**CPSIA** – The United States Consumer Product Safety Improvement Act of 2008, which expands the Consumer Product Safety Commission’s role in ensuring the safety of consumer products distributed throughout the United States of America. Detailed information can be found at <http://www.cpsc.gov/>.

**Detection Limit** – The detection limit specifies the test method sensitivity that a laboratory must be able to achieve when measuring the respective substance.

**Direct and prolonged contact with the skin** – continuous contact of more than 10 minutes duration or intermittent contact over a period of 30 minutes, per day. Definition according to Entry 51 of Annex XVII to Reach.

**ECHA** – The European Chemicals Agency, located in Helsinki, Finland, and the administering body for REACH. Detailed information can be found at <https://echa.europa.eu/>.

**Evaluation** –The second part of REACH where information submitted to the European Chemicals Agency by producers and importers during the Registration phase is examined and evaluated.

**Flame retardant** – Any chemical or chemical compound for which a functional use is to resist or inhibit the spread of fire. Flame Retardant Chemicals include, but are not limited to, halogenated, phosphorous based, nitrogen based, and nanoscale flame retardants.

**Food Contact Materials** – Any VF Product that is intended to be used to carry, hold or otherwise store food or liquid for drinking. Examples include water bottles, hydration packs, coolers and more.

**Limit Value** – The concentration limit is set for each substance as measured on the final product and represents the maximum allowable amount of the respective substance which is allowable in an RSL-compliance product. The concentration limit is shown in the Limit Value column. The limit is specified as the amount of the substance found in a specified amount of substrate, by weight (or more specifically, in milligrams of the substance per kilogram of product [mg/kg]). Concentration limits are applicable to any single part, or homogeneous part, of a product.

**N/A** - Not Applicable.

**Packaging and Packaging Materials** - Means any container providing a means of marketing, protecting, or handling a product from its point of manufacture to its sale or transfer to a consumer, including a unity package, an intermediate package or a shipping container, as defined in the specification ASTM D996. Packaging also includes, but is not limited to, unsealed receptacles, including carrying cases, crates, cups, pails, rigid foil and other trays, wrapper, and wrapping films, bags, boxes, tape, and tubs.

**PBT** – Substances that are Persistent, Bioaccumulative and Toxic are substances that do not easily break down, instead they build up in nature and in the fatty tissue of mammals, with a potential to cause serious and long-term irreversible effects. Part of the REACH Substances of Very High Concern.

**Persistent** – A persistent substance will not break down or degrade in humans, animals or nature. This means that they will stay for a very long time once produced.

**Polyvinyl Chloride (PVC)** – Polyvinyl chloride, or PVC for short, is a hard plastic that may be found in packaging materials, trims, footwear, and screen printing. PVC is prohibited from use in all VF packaging and food contact products. In addition, VF prefers all products do not contain PVC and supports efforts to phase-out PVC.

**Products** – all raw materials, including all chemical substances, and all other goods, provided to VF or its suppliers or finishing contractors for use in the manufacture or assembly of any finished product manufactured for, labelled by, offered for sale by, sold by, or distributed by, VF or any of its subsidiaries.

**Reporting Limit (RL)** – The reporting limit is the lowest concentration of a substance the laboratory is allowed to report. If the laboratory detects an amount of the substance below the RL, the laboratory shall state their findings in the laboratory test report as Not Detected.

**Registration** – The first phase of the REACH process where all chemicals manufactured in or imported into the European Union in volumes above one ton per year, must be registered to the European Chemicals Agency (ECHA).

**RoHS Electrical and Electronic Equipment** - The RoHS restrictions cover the actual electronic parts and ancillary portions of the final electrical or electronic product. Products covered by this requirement include:

- Large and small household appliances
- IT equipment
- Telecommunications equipment (although infrastructure equipment is exempt in some countries)
- Consumer equipment
- Lighting equipment - including light bulbs
- Electronic and electrical tools
- Toys, leisure, and sports equipment
- Medical devices (currently exempt)
- Monitoring and control instruments (currently exempt)
- Automatic dispensers

In addition, the components of the above products must meet the RoHS requirements. Examples include:

- Paints and pigments
- PVC (vinyl) cables as a stabilizer (e.g. power cords, USB cables)
- Solders
- Printed circuit board finishes, leads, internal and external interconnects
- Glass in television and photographic products (e.g. CRT television screens and camera lenses)
- Metal parts
- Lamps and bulbs

**Sunset date** – A date where after a substance subject to Authorisation may not be used anymore, unless an Authorisation has been granted by the European Commission.

**SVHC** – An abbreviation for Substances of Very High Concern and referring to the most hazardous substances according to article 57 of REACH. (see also Section 6E).

**Toxic** – Toxicity is an intrinsic property of a substance rendering it to harm, impair or damage living organisms.

**Toxic for Reproduction** – A substance which is toxic for reproduction will impair the ability to have children or cause irreversible harm to the offspring itself.

**Trace Amount (TR)** – The trace amount is the allowable unavoidable trace presence of a substance that has been identified with a usage ban. While a substance may not be used in the production

of a product, a small acceptable trace amount is allowed to be found on an RSL-compliant product due to minor contamination or atmospheric absorption.

**Usage Ban** – A usage ban is the prohibition of the intentional use of the respective substance during any stage of production of the VF Product or any Raw Material.

**vPvB** – vPvB are substances that are very Persistent and very Bioaccumulative. Even when such substances would not be categorized as toxic, they are still considered to be Substances of Very High Concern according to REACH because they persist in the environment and accumulate in the food chain for a long period of time.

## Appendix 3: Reporting limits

The test method indicated shall be used by the VF approved laboratory to determine compliance with the RSL. VF requires the lab to adopt a reporting limit not greater than the one here indicated.
