Titan Pharmaceuticals Reports First Quarter 2015 Financial Results

Management Team to Host Conference Call May 14 at 1 p.m. EDT / 10 a.m. PDT

SOUTH SAN FRANCISCO, CA -- (Marketwired) -- 05/13/15 -- [Titan Pharmaceuticals, Inc.](#) (OTCQB: TTNP), a specialty pharmaceutical company developing proprietary therapeutics for the treatment of select chronic diseases utilizing its ProNeura™ long-term drug delivery technology, today reported financial results for the first quarter ended March 31, 2015.

Total revenues in the first quarter of 2015 and 2014 were consistent at approximately \$0.9 million. These revenues consisted entirely of license revenue and reflect the amortization of the upfront license fee received from development and commercialization partner Braeburn Pharmaceuticals in December 2012.

Total operating expenses for the quarter ended March 31, 2015 were approximately \$2.5 million, compared with approximately \$1.8 million in the same quarter in 2014. These expenses consisted of research and development (R&D) expenses of approximately \$1.4 million, compared with approximately \$1.0 million in the first quarter of 2014. The approximately \$0.4 million increase in R&D expenses was primarily due to external R&D expenses related to the support of the Probuphine® and ProNeura product development programs, and a small increase in other R&D expenses.

General and administrative (G&A) expenses for the first quarter of 2015 were approximately \$1.1 million, compared with approximately \$0.9 million for the same period in 2014. The approximately \$0.2 million increase in G&A expenses during the first quarter was a result of higher non-cash stock compensation and employee-related costs of approximately \$0.1 million and an increase in other expenses of approximately \$0.1 million.

Net other expense for the first quarter of 2015 was approximately \$3.3 million, compared with approximately \$0.9 million for the same period in 2014. Net other expense consisted primarily of non-cash losses on changes in the fair value of warrants.

Net loss for the first quarter 2015 was approximately \$4.9 million, or approximately \$0.04 per share, compared with approximately \$1.8 million, or approximately \$0.02 per share in the same quarter in 2014.

At March 31, 2015, Titan had approximately \$13.4 million in cash, which the Company believes is sufficient to fund planned operations into the fourth quarter of 2016.

"During the quarter we continued to support our partner Braeburn in the clinical and CMC activities of the Probuphine program, especially as Braeburn worked to complete the final

Phase 3 trial of Probuphine for the long-term maintenance treatment of opioid dependence," said Titan President Sunil Bhonsle." The trial is progressing as planned. We continue to expect results next month, with the potential resubmission of the NDA later this year, paving the way for possible commercialization of Probuphine next year as the first product on the market to provide around-the-clock maintenance treatment to patients for six months following a single procedure."

Marc Rubin, M.D., executive chairman of Titan, added, "This is a transformative time for Titan. While we remain focused on moving Probuphine through the regulatory process, we are enthusiastic about the broader prospects of our ProNeura platform for treating select diseases for which sustained levels of medication in the blood could provide a health or safety benefit. Our initial work on ProNeura for Parkinson's is advancing nicely, with plans to begin a proof-of-concept clinical study in the second half of 2016."

Conference Call

[Titan Pharmaceuticals, Inc.](#) (OTCQB: TTNP) will host a live conference call at 1 p.m. EDT / 10 a.m. PDT on Thursday, May 14, 2015 to discuss the company's financial results as of March 31, 2015. The call will be hosted by Sunil Bhonsle, president; Kate Glassman Beebe, Ph.D., executive vice president and chief development officer; Brian Crowley, vice president of finance; and Marc Rubin, M.D., executive chairman.

The live webcast of the call may be accessed by visiting the Titan website at <http://www.titanpharm.com>. The call can also be accessed by dialing 888-287-5563, participant code 9760558 five minutes prior to the start time. A replay of the call will be available on the company website approximately two hours after completion of the call and will be archived for two weeks.

ProNeura™ Technology

Probuphine is the first product to utilize Titan's proprietary, long-term drug delivery technology, ProNeura, which has the potential to be used in developing products for the treatment of other chronic conditions. In July 2012, Titan announced that it had successfully completed preclinical investigation into the feasibility of a long-term, around-the-clock, non-fluctuating dopamine agonist treatment for Parkinson's disease, where maintaining stable, around-the-clock blood levels of dopamine agonists may benefit the patient and improve medical outcomes. Titan has been issued patents covering certain dopamine agonist implants in Europe, Japan, Australia, Canada, South Korea, Mexico, New Zealand, South Africa, and Hong Kong, while prosecution of patent applications continues in the U.S., Israel, India and China.

About Titan Pharmaceuticals

Titan Pharmaceuticals Inc. (OTCQB: TTNP), based in South San Francisco, CA, is a specialty pharmaceutical company developing proprietary therapeutics primarily for the treatment of serious medical disorders. The company's lead product candidate is Probuphine®, a novel and long-acting formulation of buprenorphine for the long-term maintenance treatment of opioid dependence. Probuphine employs Titan's proprietary drug delivery system ProNeura™, which is capable of delivering sustained, consistent levels of medication for six months or longer. Titan has granted North American commercial rights for Probuphine to Braeburn Pharmaceuticals. If approved, Probuphine would be the first and only commercialized treatment of opioid dependence to provide continuous, around-the-clock blood levels of buprenorphine for six months following a single procedure. The

ProNeura technology has the potential to be used in developing products for treating other chronic conditions, such as Parkinson's disease, where maintaining consistent blood levels of a dopamine agonist may benefit the patient and improve medical outcomes.
