# Non-GAAP measures

As is further discussed in the attached tables, we use non-GAAP measures including Adjusted gross billings as supplemental measures of the performance of our business. Our use of these measures has limitations and you should not consider them in isolation or use them as substitutes for analysis of our financial results under US GAAP. The attached tables provide a reconciliation of each non-GAAP measure to the most nearly comparable measure under US GAAP.

(1) We define adjusted gross billings as net sales in accordance with US GAAP, adjusted for the cost of sales related to Software – security and highly interdependent with support and Maintenance, support and other services. We provided a reconciliation of Adjusted gross billings to net sales, which is the most directly comparable US GAAP measure. We use Adjusted gross billings of product and services as a supplemental measure of our performance to gain insight into the volume of business generated by our business, and to analyze the changes to our accounts receivable and accounts payable. Our use of Adjusted gross billings of product and services as analytical tools has limitations, and you should not consider them in isolation or as substitutes for analysis of our financial results as reported under U.S. GAAP. In addition, other companies, including companies in our industry, might calculate Adjusted gross billings of product and services as comparative measures.
