About XOMA Corporation

XOMA's innovative product candidates are the result of the Company's expertise in developing ground-breaking monoclonal antibodies, including allosteric modulating antibodies, which has created opportunities to develop new classes of therapeutic antibodies with the potential to treat a wide range of human diseases. XOMA is developing its lead product gevokizumab (IL-1 beta modulating antibody) with SERVIER through a global Phase 3 program for Behçet's disease uveitis and non-infectious uveitis and in a Phase 3 program in pyoderma gangrenosum, as well as ongoing proof-of-concept studies in other IL-1-mediated diseases. XOMA's scientific research has also produced the XMet program, which consists of three classes of Selective Insulin Receptor Modulators (SIRMs) antibodies, including XOMA 358, that are being investigated for the treatment of abnormal metabolic states. XOMA's extensive antibody expertise includes antibody discovery, optimization, cell line and process development.
