Ameresco Announces Completion of 27-Megawatt Solar Farm in Village of DePue, IL

The solar farm's more than 65,000 photovoltaic panels are estimated to produce 37,000 megawatt hours of green, emission-free energy in its first year of operation

FRAMINGHAM, Mass. & DEPU, Ill.--(BUSINESS WIRE)-- [Ameresco, Inc.](https://www.ameresco.com), (NYSE: AMRC), a leading cleantech integrator specializing in energy efficiency and renewable energy, today announced the completion of a 26.3 megawatt (MW DC) 20 MW AC, solar farm in DePue, Illinois. With its completion, the solar farm becomes the largest of its kind in Bureau County and will significantly advance the state's goal of reaching 25 percent renewable energy by 2025.

The DePue solar farm consists of 65,832 solar photovoltaic (PV) panels

strategically installed on ballast blocks entirely above ground and is estimated to produce 37,000 megawatt hours of green, emission-free energy in its first year of operation. Ameresco has served as the developer, builder and owner of the solar farm on the brownfield site and began development plans in October 2019.

"We're so glad to have seen this important renewable energy project through to completion and commend the Village of DePue and the state of Illinois for their commitment to a cleaner, more sustainable future," said Lou Maltezos, Executive Vice President of Ameresco. "We look forward to seeing the economic and environmental benefits of this new solar farm for years to come."

DePue's solar farm is projected to offset 25,947 metric tons of CO2 annually, which is equivalent to taking 5,509 passenger vehicles off the road for one year or powering 3,280 homes for a year. As the solar facility's owner and operator, Ameresco will remain in the community to provide maintenance and support services for the life of the facility.

"I'm so proud that the Village of DePue is now officially on the path toward achieving our clean energy goals and making a tangible environmental impact for our community and the state" said Daniel Hoffert, Village President. "This project epitomizes our commitment to forging a sustainable future while driving economic prosperity for our residents and the region."

With the completion of the project, the Village will benefit from a portion of the energy generated for facility usage, resulting in significant annual energy cost savings throughout the life span of the installation, in addition to permitting fees collected throughout the site's development process. Bureau County will also collect increased property tax revenue from the project completion.
