

Motus GI's Pure-Vu System® Adopted by Sinai Hospital of Baltimore

Implementation of the Pure-Vu System is designed to improve efficiencies and outcomes of GI endoscopy procedures

FORT LAUDERDALE, Fla., May 25, 2021 (GLOBE NEWSWIRE) -- [Motus GI Holdings, Inc.](#), (NASDAQ: MOTS) ("Motus GI" or the "Company"), a medical technology company providing endoscopy solutions that improve clinical outcomes and enhance the cost-efficiency associated with the diagnosis and management of gastrointestinal conditions, announced today that Sinai Hospital of Baltimore, a LifeBridge Health center, will move ahead with fully adopting the Pure-Vu® System with the aim of improving efficiencies and clinical outcomes of inpatient colonoscopy procedures for patients who present with inadequate bowel preparation. Sinai Hospital, a nonprofit teaching hospital with renowned Centers of Excellence, is the largest community hospital in Maryland with 483 beds.

Dr. John Rabine, Director of Gastroenterology Diagnostic Center & Chief of GI, Sinai Hospital, stated, "Insufficient bowel preparation for inpatient colonoscopies can limit our visibility and cause delays in both diagnosis and treatment. We are eager to see how this new system's irrigation capabilities improve visualization and may aid our clinicians as they evaluate GI issues, including potential GI bleeds, and save the time needed for additional bowel prep."

"Following a successful evaluation period, we are excited to partner with Dr. Rabine and the GI team at Sinai Hospital to expand the use of the Pure-Vu System for patients in need. Sinai treats many patients coming from nursing facilities that are fairly ill with significant comorbidities, which can often make bowel preparation difficult. During the evaluation period, we were able to showcase the Pure-Vu System's value proposition by enabling such patient cases to proceed on time, despite suboptimal prep," stated Tim Moran, Chief Executive Officer of Motus GI. "Bringing Sinai on board is a key milestone for our sales program, as it will be the first hospital within the LifeBridge Health system to adopt the Pure-Vu System. As we have described previously, we are now expanding our commercial focus to include large regional, multi-center integrated delivery networks."

About the Pure-Vu System

The Pure-Vu System integrates with standard and slim colonoscopes, as well as gastroscopes, to improve visualization during colonoscopy and upper gastrointestinal (GI) procedures while preserving established procedural workflow and techniques. Through irrigation and evacuation of debris, the Pure-Vu System is designed to provide better-quality exams. Challenges exist for inpatient colonoscopy and endoscopy, particularly for patients who are elderly, with comorbidities, or active bleeds, where the ability to visualize, diagnose and treat is often compromised due to debris, including fecal matter, blood, or blood clots. Motus GI believes this is especially true in high acuity patients, like upper GI bleeds where

the existence of blood and blood clots can impair a physician's view and removing them can be critical in allowing a physician the ability to identify and treat the source of bleeding on a timely basis. Motus GI believes the Pure-Vu System may lead to positive outcomes and lower costs for hospitals by safely and quickly improving visualization of the colon and upper GI tract, enabling effective diagnosis and treatment the first time. In multiple clinical studies to date, involving the treatment of challenging inpatient and outpatient cases, the Pure-Vu System has consistently helped achieve adequate bowel cleanliness rates greater than 95% following a reduced prep regimen. The Pure-Vu System may also be useful in the future as a tool to help reduce user dependency on conventional pre-procedural bowel prep regimens. Based on Motus GI's review and analysis of 2019 market data and 2021 projections for the U.S. and Europe, as obtained from iData Research Inc., it is estimated that during 2021 approximately 1.5 million inpatient colonoscopy procedures will be performed in the U.S. and approximately 4.8 million worldwide. Upper GI bleeds occurred in the U.S. at a rate of approximately 400,000 cases per year in 2019, according to iData Research Inc.

The Pure-Vu System is cleared by the U.S. Food and Drug Administration to help facilitate the cleansing of a poorly prepared gastrointestinal tract during colonoscopy and to help facilitate upper GI endoscopy procedures. The Pure-Vu system has received a CE Mark in the EU for use on colonoscopy.

About Motus GI

Motus GI Holdings, Inc. is a medical technology company, with subsidiaries in the U.S. and Israel, providing endoscopy solutions that improve clinical outcomes and enhance the cost-efficiency associated with the diagnosis and management of gastrointestinal conditions.
