UiPath Platform™ for Agentic Automation and Orchestration Named One of TIME's Best Inventions of 2025

AI and agentic automation transform end-to-end processes, driving unparalleled efficiency and productivity

NEW YORK--(BUSINESS WIRE)-- UiPath (NYSE: PATH), a global leader in [agentic automation](#), today announced that the UiPath Platform™ for agentic automation and orchestration has been named one of [TIME's Best Inventions of 2025](#). The annual list of Best Inventions recognizes the world's most groundbreaking inventions that are making a difference and redefining how we live. TIME evaluates each contender on a number of key factors, including originality, efficacy, ambition, and impact.

UiPath combines decades of leadership in automation and is pioneering the evolution from rule-based automation to intelligent, agentic automation. The UiPath Platform empowers organizations to bring their most ambitious plans for AI to life - combining automation, AI agents, orchestration, and people to deliver transformational impact that drives innovation and creates competitive advantage. Earlier this year, UiPath added [Maestro](#) to the UiPath Platform, enabling companies to orchestrate and manage a diverse range of agents – including those developed by third parties – by providing secure access to the right data sets and enterprise systems, enforcing governance and security protocols, and ensuring appropriate human oversight.

"From the foundation of UiPath, our mission has been to unlock human potential. The UiPath Platform is enabling professionals to automate more, focus on high-value initiatives, and drive growth with reduced cost and risk," said Daniel Dines, UiPath Founder and CEO. "This recognition highlights both our engineering innovation and customer obsession in building an AI-powered platform designed to unlock intelligence, agility, and impact at scale. We're proud to empower organizations of all sizes to capitalize on AI transformation, delivering measurable ROI from their agentic AI investments."

Customers are using the UiPath Platform to drive efficiency and performance across industries and use cases like finance & procurement, healthcare, insurance, public sector, supply chain, and manufacturing, among others. In banking, AI agents can tackle complex enterprise processes such as shortening the lending cycle by extracting data from loan files, detecting loan data defects, analyzing income patterns, and creating narratives for Fraud operations. Financial firms use it to streamline previously paper-based processes, manage regulatory programs, and uncover fraud that impacts consumers. And governmental agencies are using the UiPath Platform to keep pace with legislation meant to transform internal workflows and optimize constituent services.
