## Cummins Unveils New Sustainability Web Site

COLUMBUS, Ind.--(BUSINESS WIRE)-- Cummins Inc. (NYSE: CMI) announced the creation of a new Sustainability Web site today in addition to releasing its 7<sup>th</sup> annual Sustainability Report on the ways the Company is building stronger communities and reducing its environmental footprint.

The Web site includes all of the content in the published report and some additional material pertaining to the Company's environmental initiatives. The site will also be home to the latest sustainability news at Cummins and in-depth information on the Company's efforts.

"In the weeks to come we plan to add audio and video, photo galleries and more, as part of our effort to provide more real-time communication of our sustainability-related work," said Mark Land, Executive Director of Corporate Communications at Cummins. "We think we have a good story to tell to the growing number of groups and individuals concerned with sustainability, and we are pleased to be able to enhance our reporting in this way."

This year's report is the most in-depth version the Company has produced. Some of the new features include:

- Stories on the significant partnerships Cummins has developed around the world as part of its Corporate Responsibility program.
- A new section called Employee Relations that looks at the Company's safety efforts, diversity initiatives and programs to develop employees.
- Features in every section exploring the challenges faced by Cummins in that particular area.

The report also covers the ways Cummins through its products, practices and partnerships is fulfilling the Company's mission that "everything we do leads to a cleaner, healthier and safer environment."

The Company successfully met 2010 EPA emission regulations for on-highway diesel engines in the United States and is working with the government to develop the first-ever fuel efficiency standards for medium- and heavy-duty commercial vehicles. Cummins has reduced its Greenhouse gas emissions by 19 percent since 2005 and has engaged employees to participate in energy conservation efforts.

The report also shares information related to Company's corporate governance, risk management work and financial performance over the past year.

In addition to the full report and the new Web site, Cummins today also released a 16-page Executive Summary of the report. Copies of both the full report and the summary are available for downloading at the new Web site.

This year's published report and the Executive Summary both feature covers printed on recycled paper made in part from banana stalks. The paper was produced at EARTH University in Costa Rica, one of the significant corporate responsibility partnerships undertaken by the Company. EARTH teaches students from all over the world sustainable agriculture with the hope they will share what they learned with others when they return home.

"We printed a very limited number of copies of both the report and the summary to limit the environmental impact," Land said. "I'm pleased that for those copies we did publish, we can highlight some of the good work done at EARTH."
