Cummins Filtration Introduces FleetguardFIT™, a Revolutionary Filtration Monitoring System

FleetguardFIT—Filtration Intelligence Technology—integrates with telematics to provide full visibility into the service life of oil and fuel, lube and air filters.

NASHVILLE, Tenn.--(BUSINESS WIRE)-- Cummins Filtration today announced FleetguardFIT, the first complete real-time filtration monitoring system that provides customers full visibility to filter and oil life through the use of intelligent sensing and advanced data analytics.

This provides customers and fleets the ability to proactively detect problems allowing them to

- Avoid costly downtime
- Reduce repair and maintenance costs
- Improve total cost of ownership

“This product is another example of how we are innovating to deliver the right solution to our customers to help them be as successful as possible,” said Amy Davis, General Manager, Cummins Filtration. “FleetguardFIT allows customers to precisely understand the condition of filters and oil based on real-world usage, which is a significant improvement over the current and conventional maintenance schedules that are based only on typical duty cycles. By knowing exactly what is occurring, customers can use the equipment more efficiently, reduce maintenance costs and ultimately enhance their bottom line. FleetguardFIT is a terrific product that delivers great economic value to our customers.”

FleetguardFIT has been installed on various equipment applications in industries such as mining, rail, truck, bus, and power-generation across the globe. FleetguardFIT uses sensors, a control module, and existing telematics services to collect and communicate filter and oil life information in real time.

A subscription portal and a mobile app are also available for equipment condition data reports that are actively monitored for you. The ability to completely monitor filter performance in real time allows equipment owners, maintenance personnel, and users to

tailor service intervals based on true equipment usage and remaining oil and filter life.

To learn more about FleetguardFIT and how to order for your equipment application, contact us at info@fleetguardfit.com or visit www.cumminsfiltration.com/FleetguardFIT.

About Cummins Filtration

A wholly owned business unit of Cummins Inc., Cummins Filtration is a world leader in OEM and aftermarket filtration solutions for diesel engines, transmissions and industrial applications, including engines ranging from 3 to above 100 liters in displacement.
