CollPlant Expands the Distribution of its VergenixSTR Product in Europe

REHOVOT, Israel, Sept. 15, 2025 /PRNewswire/ -- CollPlant Biotechnologies (NASDAQ: CLGN), or 'CollPlant', a regenerative and aesthetics medicine company developing innovative technologies and products based on its non-animal-derived collagen for tissue regeneration and medical aesthetics, today announced the expansion of its European distribution network for VergenixTM STR through the signing of a new agreement in Poland. VergenixTM STR is based on the Company's rhCollagen technology and is intended for the treatment of tendinopathy by promoting healing and repair of tendon injuries in a variety of tendons.

VergenixTM STR is a soft tissue repair matrix specifically designed for combination with platelet-rich plasma (PRP). Upon mixing, it forms a scaffold with delayed degradation and strong retention at the injury site, supporting a localized and sustained therapeutic effect. The product is intended to promote tendon healing across multiple indications, including lateral epicondylitis ('tennis elbow'), rotator cuff injuries, patellar tendinopathy, Achilles tendon injuries, and hand tendon repairs.

Yehiel Tal, Chief Executive Officer of CollPlant, commented: "As we expand our distribution network across Europe and the Asia-Pacific region, we are excited about the significant market potential for VergenixTM STR. The product provides a differentiated treatment for tendon injuries by forming a gel matrix that enables localized, sustained release of growth factors at the injury site, thereby supporting optimal healing. We expect to deliver the first shipment to our distributor by the end of this year and look forward to further broadening our global distribution network for VergenixTM STR in additional territories."

About Vergenix STR

VergenixSTR is a soft tissue repair matrix that combines cross-linked rhCollagen with Platelet-rich plasma, or PRP, a concentrated blood plasma that contains high levels of platelets, a critical component of the healing process. Platelets contain growth factors that are responsible for stimulating tissue generation and repair, including soft tissue repair, bone regeneration, development of new blood vessels, and stimulation of the wound healing process. VergenixSTR serves as a scaffold to support cell proliferation and the release of growth factors. The product is injected into the affected area and forms a viscous gel matrix which serves as a temporary reservoir for PRP in the vicinity of a tendon injury site, holding the platelet concentrate in place at the injured area. The matrix formed has the capabilities to activate the platelets in PRP, thereby releasing growth factors in a controlled manner and controlled biodegradation time, enabling optimal healing.

About CollPlant Biotechnologies

CollPlant is a regenerative and aesthetic medicine company ushering in a new era of medical solutions with a focus on 3D bioprinting of tissues and organs, tissue repair and medical aesthetics. The Company's products are based on its rhCollagen (recombinant human collagen) produced with CollPlant's proprietary plant-based genetic engineering technology. These products address indications for the diverse fields of tissue repair, aesthetics, and organ manufacturing.

In 2021, CollPlant entered into a development and global commercialization agreement for dermal and soft tissue fillers with Allergan, an AbbVie company, the global leader in the dermal filler market.
