Radeon Pro 400 Series Graphics: AMD's Most Powerful Ultrathin Graphics Processors*

Available first in the new 15-inch MacBook Pro

SUNNYVALE, CA -- (Marketwired) -- 10/27/16 -- Today [AMD](#) (NASDAQ: AMD) unveiled a new family of power-efficient graphics processors, [Radeon™ Pro 400 Series Graphics](#). Available first in the all-new 15-inch MacBook Pro, select Radeon Pro 400 Series graphics deliver extraordinary performance and efficiency gains over the prior generation to fuel modern creative efforts from anywhere inspiration strikes.

Radeon Pro 400 Series Graphics are designed specifically for today's makers -- the artists, designers, photographers, filmmakers, visualizers and engineers that shape the modern content creation era. Harnessing AMD's acclaimed Polaris architecture, Radeon Pro 400 Series Graphics are built on the industry's most advanced process technology for graphics processors in production today, 14nm FinFET, resulting in incredibly small transistors. To enable the thinnest graphics processor possible, AMD also employs a complex process known as 'die thinning' to reduce the thickness of each wafer of silicon used in the processor from 780 microns to just 380 microns, or slightly less than the thickness of four pieces of paper. Operating in a power envelope under 35W, the Radeon Pro 450, 455, and 460 Series graphics processors deliver spectacular energy efficiency and cool, quiet operation to speed through the most demanding tasks in popular creative applications.

"We couldn't be more proud to have Radeon Pro 400 Series Graphics launching in the new 15-inch MacBook Pro, a notebook designed for performance and creativity," said Raja Koduri, senior vice president and chief architect, Radeon Technologies Group, AMD. "Today there are millions of professional creators and designers, and a billion more who aspire to reach the next level. Radeon Pro 400 Series Graphics are a powerful and versatile creative technology that gives makers entirely new ways to create the art of the impossible no matter where they are."

To celebrate the people behind the products, and the passion shared by makers of all sorts, AMD is launching a new program called "Meet the Creators," bringing creators together and inviting them to share their work. Creators will have the opportunity to collaborate across a variety of fields, learn about new tools and techniques for their respective crafts, and have a chance to be featured in Radeon Pro promotional campaigns.

The "Meet the Creators" program will also explore how Radeon Pro graphics play a role in the creative process, from harnessing extraordinary graphics performance in today's popular 2D and 3D creative applications, to using modern low-overhead graphics and compute APIs to accelerate rendering in today's workflows. A part of that workflow is Radeon ProRender, AMD's physically-based rendering engine planned for open source later this year, and supported via plugins across many popular 3D content creation applications including

Autodesk® Maya®, and a beta plugin for Rhino®. Bolstering the list of supported applications, AMD and Maxon announced today that Radeon ProRender software will be available in a future release of Maxon's powerful and intuitive Cinema 4D application for 3D modeling, animation and rendering, providing GPU-accelerated performance on Mac by leveraging Radeon Pro graphics and Apple's Metal API.

About AMD

For more than 45 years AMD has driven innovation in high-performance computing, graphics, and visualization technologies -- the building blocks for gaming, immersive platforms, and the datacenter. Hundreds of millions of consumers, leading Fortune 500 businesses, and cutting-edge scientific research facilities around the world rely on AMD technology daily to improve how they live, work, and play. AMD employees around the world are focused on building great products that push the boundaries of what is possible. For more information about how AMD is enabling today and inspiring tomorrow, visit the AMD (NASDAQ: AMD) [website](http://www.amd.com), [blog](http://blog.amd.com), [Facebook](https://www.facebook.com/amd) and [Twitter](https://twitter.com/amd) pages.

*** The Radeon™ Pro 460 graphics processor delivers 1.86 peak TFLOPS of performance in a die that is 380 microns resulting in a z-height of 1.5mm in the fully packaged part which is thinner than the Radeon™ R9 370X graphics processor which delivers 1.02 peak TFLOPs of performance in a die that is which is 750 microns resulting in a z-height of 1.73mm in the fully packaged part. No other graphics processor as of 10/27/2016 from AMD provides more performance at 30W TDP operation with a thinner die and smaller total z-height. GRM-22**
