## **Inhibikase Therapeutics to Present Phase 1/1b Clinical Data at the Upcoming AD/PD™ Alzheimer's & Parkinson's Diseases Conference**

BOSTON and ATLANTA, March 8, 2022 /PRNewswire/ -- Inhibikase Therapeutics, Inc. (Nasdaq: IKT) (Inhibikase), a clinical-stage pharmaceutical company developing therapeutics to modify the course of Parkinson's disease and related disorders, today announced that Dr. Milton Werner, Ph.D., President & Chief Executive Officer of Inhibikase, will give an oral presentation at the AD/PD™, Alzheimer's & Parkinson's Diseases Conference being held in Barcelona, Spain from March 15-20, 2022.

Dr. Werner will discuss the results from the Company's preclinical, Phase 1 and Phase 1b studies of its highly selective Abelson Tyrosine Kinase inhibitor IKT-148009 for the treatment of Parkinson's disease. In preclinical animal models, IKT-148009 has demonstrated the ability to clear alpha-synuclein aggregates from the brain and GI tract, protect neurons from degeneration, may promote regeneration of neurons, and induce substantial functional recovery in measures of motor and non-motor function. The Phase 1 study, which was initiated in February 2021, demonstrated high levels of drug exposure in the blood with no clinically significant adverse events observed across 88 subjects in single and/or 7-day dosing up to 250 mg. Penetration into the central nervous system was confirmed by measures of IKT-148009 in the spinal fluid. In the ongoing Phase 1b study in mild to moderately advanced Parkinson's patients (Hoehn & Yahr scale  $\leq 3.0$ ), no clinically meaningful adverse events have been observed and the Company will provide an update on safety and pharmacokinetics of IKT-148009 in patients. These promising results continue to validate the safety and therapeutic potential of IKT-148009 as a potential disease-modifying treatment for Parkinson's disease. Inhibikase expects to initiate a Phase 2 study for IKT-148009 in the second quarter of 2022.

Details for the presentation are below:

### **Alzheimer's & Parkinson's Diseases Conference:**

**Presentation:** Parkinson's Disease Modification Through Abl Kinase Inhibition

Date: Friday, March 18, 2022

Time: 5:45 PM - 6:00 PM

### **About Inhibikase ([www.inhibikase.com](http://www.inhibikase.com))**

Inhibikase Therapeutics, Inc. (Nasdaq: IKT) is a clinical-stage pharmaceutical company developing therapeutics for Parkinson's disease and related disorders. Inhibikase's multi-

therapeutic pipeline focuses on neurodegeneration and its lead program IkT-148009, an Abelson Tyrosine Kinase (c-Abl) inhibitor, targets the treatment of Parkinson's disease inside and outside the brain. Its multi-therapeutic pipeline is pursuing Parkinson's-related disorders of the brain and GI tract, orphan indications related to Parkinson's disease such as Multiple System Atrophy, or MSA, and drug delivery technologies for kinase inhibitors such as IkT-001Pro, a prodrug of the anticancer agent Imatinib that the Company believes will provide a better patient experience with fewer on-dosing side-effects. The Company's RAMP™ medicinal chemistry program has identified a number of follow-on compounds to IkT-148009 to be applied to other cognitive and motor function diseases of the brain. Inhibikase is headquartered in Atlanta, Georgia with offices in Boston, Massachusetts.
