

About Marvell

Essential technology, done right™

Marvell is driven by the beliefs that infrastructure powers progress, execution is as essential as innovation, and better collaboration builds better technology.

Focused and determined, Marvell unites behind the goals of its partners, investors, and customers and sits shoulder-to-shoulder with them to actualize inspirations. Agile in both thinking and partnerships, Marvell

looks for unexpected connections that deliver a competitive edge and reveal new opportunities. Marvell believes that how things are done matters just as much as what is accomplished.

That's why Marvell goes all in on collaboration. With a foundation built on partnership, anything is possible.

Unique Value

Marvell develops and delivers semiconductor solutions that move, store, process and secure the world's data. As a leader in essential data infrastructure semiconductor technology trusted by the top data center operators and OEMs, Marvell silicon powers innovation in cloud and AI, carrier infrastructure, and enterprise networking markets. With a comprehensive portfolio of compute, interconnect, network switching, security and storage products and IP, the company offers merchant, semi-custom and full-custom options to address a range of customer requirements.

Reliable results: delivering what's promised; know what to expect to prioritize what's next

Superior performance: dynamic perspectives create the smartest path; cross-functional collaboration leads to greater consistency and higher velocity

Nimble dexterity: listening, learning and adapting; thoroughness and flexibility cut delays and quality issues

Rigorous execution: working shoulder-to-shoulder to lead the charge; aligned teams work smarter to get the job done right every time

End Markets

Data Center: Accelerated Infrastructure for the AI Era

As the number and size of AI models explodes, data center infrastructure requirements are evolving rapidly, forcing innovation across the compute, interconnect and switching domains of accelerated infrastructure. Marvell custom silicon and system-level connectivity platforms enable hyperscalers to design and implement their own unique AI data-center architectures optimized for their own unique applications.

Carrier Infrastructure: 5G Network Silicon that Connects the World

With increased capabilities, performance and edge intelligence, 5G enables a plethora of new consumer and enterprise applications that promise to transform entire industries and serve the world's diverse connectivity needs for years to come. Marvell's compute platforms are proven at global scale with the performance and programmability that enable carriers to sustainably innovate in this frontier without compromise.

Enterprise Networking: Modernizing and Securing the Campus

To power digital transformation, IT leaders must design more robust, secure and autonomous enterprise networks that span from HQ to branch to on-premises data center to cloud. Network equipment must support rising bandwidth demands, a more complex threat landscape, and the analytics needed to power AIOps tools. The Marvell connectivity and compute portfolio delivers the performance, intelligence, security and telemetry needed for the modern enterprise network.

Fast Facts

- **Founded in 1995**
- **\$5.8 billion annual revenue in FY25**
- **7,100+ employees**
- **Headquartered in Santa Clara, California**
- **10,000+ patents worldwide**
