CLEAR Offers Secure Identity in Epic for Community Provider Access and Controlled-Substance Prescribing

CLEAR1 in Epic Toolbox now helps health systems verify outside providers and prescribing clinicians

NEW YORK, Nov. 9, 2026 /PRNewswire/ -- CLEAR® (NYSE: YOU), the secure identity company, today announced that CLEAR1, CLEAR's secure identity platform, is live in two new integrations in Epic Toolbox. One is for EpicCare Link, the portal community providers use to reach a health system's patient records, and the other is for electronic prescribing of controlled substances (EPCS). Secure access starts with a single trusted identity, and these new integrations power new use cases for care teams and health system employees.

Healthcare workforce identity remains fragmented across hiring, login, account recovery, and prescribing workflows. Doctors, nurses, and staff are often required to prove who they are repeatedly, creating friction, slowing access to the tools they need, and introducing gaps that can be exploited through stolen credentials or increasingly sophisticated deepfakes. CLEAR1 already works with numerous health systems around the country to securely verify identities for employees and clinicians, streamlining access to clinical systems, applications, and facilities, supporting a safer, more efficient care environment. With these two integrations, CLEAR1 now powers more steps in the care team journey.

EpicCare Link for working with community providers. Health systems might rely on paper forms and manual reviews to give community and affiliated providers access to EpicCare Link. With CLEAR1, health systems can now verify providers during onboarding, and providers can create their own accounts by verifying with a selfie and a government ID. First announced in August 2025, the integration is now live and available in the Identity Verification for EpicCare Link Epic Toolbox Category.

Electronic Prescribing of Controlled Substances. Prescribing controlled medications requires strong proof of who is at the keyboard, without slowing down clinicians. Health systems can select CLEAR1 to verify clinicians who register to prescribe, and also to verify the person at the moment of prescribing, creating a safer, more frictionless experience. CLEAR1 has achieved Drummond Certified® status (independent testing and certification

conducted by Drummond Group, LLC). The certification confirms that its identity proofing for individual and institutional practitioners, two-factor authentication, biometric, credential revocation, and EHR audit trail and prescriber validation capabilities meet applicable DEA requirements for electronic prescribing under 21 CFR Part 1311.

The integration is now live and available in the End User Authentication Epic Toolbox Category.

"Secure access shouldn't have to come at the expense of a delightful onboarding experience," said **Kristin Milano, AVP, Cybersecurity, Ochsner Health**. "CLEAR's integration with EpicCare Link creates an opportunity to make identity verification easier for referring providers and their staff while maintaining the trust and security these workflows require."

"Doctors and nurses shouldn't spend their shifts proving who they are," said **David Bardan, SVP, General Manager and Head of Healthcare at CLEAR**. "Getting into a patient's chart and prescribing a controlled medication are two more places they no longer have to start from scratch. We're using secure identity to make healthcare safer and easier for care teams, from the first day to the first patient, and every shift after."

Using CLEAR is simple and secure. After a quick one-time setup using a government-issued ID, users can re-verify in seconds with just a selfie, within their health system or anywhere CLEAR1 is used, designed to offer a frictionless alternative to paper forms, manual reviews, or passwords alone.

These integrations follow CLEAR's recent announcement that it has been selected by the US Department of Veterans Affairs for a new pilot initiative to modernize the veteran experience on VA.gov. The VA serves a community of roughly 17 million living U.S. Veterans and operates the nation's largest integrated health care system, serving 9.1 million enrolled Veterans each year.

CLEAR1 is Full Service certified by the Kantara Initiative for NIST Identity Assurance Level 2 (IAL2) and Authenticator Assurance Level 2 (AAL2), high-assurance standards that are foundational to trusted healthcare data exchange.

Epic and EpicCare Link are registered trademarks of Epic Systems Corporation.

About CLEAR
CLEAR's mission is to strengthen security and create frictionless experiences. With over 46 million Members and a growing network of partners across the world, CLEAR's secure identity platform is transforming the way people live, work, and travel. Whether you are traveling, at the stadium, or on your phone, CLEAR connects you to the things that make you, you, making everyday experiences easier, more secure, and friction-free. CLEAR is committed to privacy done right. Members are always in control of their own information, and we do not sell biometric or sensitive personal data. For more information, visit clearme.com.

Forward-Looking Statements
This release may contain statements that constitute forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995. This includes, without limitation, statements about the expected benefits, functionality and adoption of CLEAR1's

EpicCare Link and electronic prescribing of controlled substances (EPCS) integrations in Epic Toolbox, including the ability of these integrations to streamline access, reduce friction for clinicians, community providers and health system staff, and help protect against stolen credentials and deepfakes; our ability to expand CLEAR1 to additional steps in the care team journey and to new use cases and health system customers; the anticipated progress and outcomes of our pilot initiative with the U.S. Department of Veterans Affairs; and the growth of our network of partners. Investors are cautioned that any such forward-looking statements are not guarantees of future performance or results and involve risks and uncertainties, and that actual results, developments and events may differ materially from those in the forward-looking statements as a result of various factors, including our ability to attract and retain health system customers and achieve adoption of these integrations; our dependence on our relationship with Epic Systems Corporation and the continued availability of our integrations in Epic Toolbox; our ability to maintain our Drummond Certified status and Kantara Initiative IAL2 and AAL2 certifications and to keep complying with Drug Enforcement Administration requirements for electronic prescribing of controlled substances, including under 21 CFR Part 1311, as those requirements change; changes in laws and regulations governing healthcare, privacy, data protection and biometric information; security breaches, cyberattacks, fraud and identity-spoofing techniques, including deepfakes; defects, errors or interruptions in our platform; risks associated with government contracting, including that the VA pilot may not be expanded, extended or funded; lengthy and unpredictable healthcare sales cycles; competition in the identity verification market; and those described in the Company's filings with the Securities and Exchange Commission, including the sections titled "Risk Factors" in our Annual Report on Form 10-K. The Company disclaims any obligation to update any forward-looking statements contained herein.
