# STWA Congratulates Pipeline Research Council International on New Technology Development Center

SANTA BARBARA, CA -- (Marketwired) -- 05/28/15 -- **Save The World Air, Inc., d/b/a STWA (the "Company")** (OTCQX: ZERO), a developer of integrated technology solutions for the energy industry, today offered congratulations to Pipeline Research Council International ("PRCI") on its new, state-of-the-art Technology Development Center ("TDC") in Houston, Texas, which will open on June 16, 2015. PRCI, the preeminent global collaborative research development organization of, by, and for the energy pipeline industry, will utilize the TDC for research and technology development to ensure the safety and efficacy of global pipeline infrastructure.

Greggory Bigger, STWA Chief Executive Officer and Chairman, commented, "I would like to congratulate PRCI, both personally and on behalf of STWA, on the completion of the Technology Development Center in Houston. Having worked closely with PRCI in the past, we can attest to the organization's position as an independent, third-party entity that leads the industry forward through the testing, development and optimization of innovative pipeline technologies. I have no doubt that the TDC will be a resounding success."

STWA was contracted by PRCI in 2011 for testing of the Company's Applied Oil Technology™ (AOT™) system for reducing the viscosity of crude oil. The tests, conducted in 2011 and 2012 at the U.S. Department of Energy's ("DOE") Rocky Mountain Oilfield Testing Center in Casper, Wyoming, were co-funded by PRCI and STWA. The DOE's test results found that AOT successfully reduces crude oil viscosity, pipeline line-loss and pump motor power consumption.

Mr. Bigger continued, "I thank PRCI, and especially Director of Research Operations Michael Whelan, for their support of STWA over the years. PRCI partnered with the Company as we built out our early-stage AOT technology, and the successful testing at the DOE's Rocky Mountain Oilfield Testing Center would not have been possible without Mr. Whelan. We plan to reengage with PRCI in late 2015 to further optimize our entire technology portfolio, including both the AOT and STWA Joule Heat solutions. We continue to make great strides in business development and technology advancements as we move forward with our ongoing transition from R&D to commercialization, and utilizing the advanced capabilities offered at the Technology Development Center will allow us to provide additional enhancements to STWA's offerings as we look ahead to technology deployments."

***About Save the World Air, Inc. d/b/a STWA***

Save The World Air, Inc. (STWA) (OTCQX: ZERO) provides the global energy industry with patent-protected industrial equipment designed to deliver measurable performance improvements to crude oil pipelines. Developed in partnership with leading crude oil production and transportation entities, STWA's high-value solutions address the enormous capacity inadequacies of domestic and overseas pipeline infrastructures that were designed and constructed prior to the current worldwide surge in oil production. In support of our clients' commitment to the responsible sourcing of energy and environmental stewardship, STWA combines scientific research with inventive problem solving to provide energy efficiency 'clean tech' solutions to bring new efficiencies and lower operational costs to the upstream, midstream and gathering sectors. More information is available at: [www.stwa.com](http://www.stwa.com).
