About Kane Biotech Inc.

Kane Biotech is a biotechnology company engaged in the development of products to prevent and disperse biofilms. Biofilms develop when bacteria, and other microorganisms, form a protective matrix that acts as a shield against attack. When in a biofilm, bacteria become highly resistant to antibiotics, biocides, disinfectants, high temperatures and host immune responses. This resiliency contributes to human health problems such as tooth decay, medical device associated infections and recurrent urinary tract infections.

Kane Biotech uses a patent protected technology based on molecular mechanisms of biofilm formation and methods for finding compounds that inhibit or disrupt biofilms. The Corporation has evidence that this technology has potential to significantly improve the ability to prevent and/or destroy biofilms in several medical and industrial applications.

The TSX Venture Exchange does not accept responsibility for the adequacy or accuracy of this release.
