MRI Interventions to Exhibit Its ClearPoint Navigation Platform for Neurosurgery at AANS 2015 Annual Meeting

IRVINE, Calif., April 14, 2015 (GLOBE NEWSWIRE) -- MRI Interventions, Inc. (OTCQB:MRIC) today announced that its ClearPoint[®] neuro navigation platform will be on exhibit at the 2015 Annual Meeting of the American Association of Neurological Surgeons (AANS) May 4-6, 2015, in Washington, D.C. Conference attendees are invited to visit the MRI Interventions booth (#708) to learn about the ClearPoint system's unique capability to enable a wide range of neurosurgical procedures under real-time MRI guidance.

The ClearPoint system is the only navigation platform designed to allow real-time visualization during minimally-invasive neurosurgical procedures. ClearPoint software works with MRI to assist surgeons in planning a target and trajectory, and the SmartFrame[®] targeting devices enable the MRI-guided alignment and minimally invasive insertion of surgical instruments. The ClearPoint system allows surgeons to monitor the placement of devices in the brain in real time for a variety of neurosurgical procedures, including placement of electrodes (i.e., deep brain stimulation electrodes), catheters (i.e., laser ablation catheters), and biopsy needles.

About MRI Interventions, Inc.

Building on the imaging power of MRI, MRI Interventions is creating innovative platforms for performing the next generation of minimally invasive surgical procedures in the brain and heart. The Company's ClearPoint[®] system utilizes a hospital's existing diagnostic or intraoperative MRI scanner to enable a range of minimally invasive procedures in the brain. In partnership with Siemens Healthcare, MRI Interventions is developing the ClearTrace[®] system to enable MRI-guided catheter ablations to treat cardiac arrhythmias.
