MRI Interventions Adds ClearPoint® Neuro Navigation to Another Top-Ten Ranked Children's Hospital

IRVINE, Calif., July 25, 2017 (GLOBE NEWSWIRE) -- MRI Interventions, Inc. (OTCQB:MRIC) today announced that Children's National Hospital in Washington DC, ranked number nine in the country for pediatric neurosurgery by U.S. News and World Report, performed its first case utilizing the ClearPoint® Neuro Navigation System. The ClearPoint System is now being utilized in seven of the top ten nationally ranked Children's Hospitals for Neurosurgery and Neurology, as well as several other leading hospitals specializing in pediatric care.

"We are pleased to see this prestigious institution adopt our technology to enhance the care they provide to their pediatric neurosurgery patients," said Frank Grillo, President and CEO of MRI Interventions, Inc. "Our total installed base now exceeds 50 hospitals, and children's hospitals have been early adopters. The pediatric neurosurgeons in these hospitals understand the value of being able to see the brain anatomy in real-time MRI during the procedure, as these patients are still growing and their brain is still developing. With ClearPoint, the surgeon can be sure of careful and accurate placement of devices as needed."

Real time MRI imaging provides the surgeon with current views of the patient's brain anatomy at the time of surgical planning, device alignment, and navigation of selected device to target, resulting in improved accuracy so critical in the pediatric population. Only ClearPoint Neuro Navigation enables laser ablation procedures to be performed entirely in the MRI suite, eliminating the need to transport the patient mid-procedure from the operating room to the MRI suite. The ClearPoint System enables a minimally invasive approach which allows surgeons to plan, target, and adjust trajectories under real time MRI-guided visualization for placement of electrodes, catheters and biopsy needles.

About MRI Interventions, Inc.

Building on the imaging power of magnetic resonance imaging ("MRI"), MRI Interventions is creating innovative platforms for performing the next generation of minimally invasive surgical procedures in the brain. The ClearPoint Neuro Navigation System, which has received 510(k) clearance and is CE marked, utilizes a hospital's existing diagnostic or intraoperative MRI suite to enable a range of minimally invasive procedures in the brain.
