

Interpace Pharma Solutions is a leader in enabling precision medicine for immuno-oncology and genomic medicine through diagnostics, molecular markers, and data solutions.

Interpace Pharma Solutions (IPS) provides laboratory services supporting clinical trials and advanced diagnostic development across immuno-oncology, hematology, and solid tumors. Our scientific, medical, and regulatory experts help our biopharma and diagnostic clients accelerate their clinical development programs. Through our extensive technology portfolio and agile approach, we provide a broad suite of applications in support of our industry partners.

Immunohistochemistry (IHC) Services

IPS provides full IHC capabilities accommodating a variety of analyses utilizing various platforms. Its state-of-the-art IHC laboratory is equipped with modern automation and advanced capabilities, including digital pathology. IPS has implemented lean workflow processes that track sample custody at various steps in the IHC lab and provides metrics on performance in real time. IPS's IHC portfolio includes a full range of FDA-cleared, IHC-based complementary and companion diagnostics (CDx) in support of cutting edge immuno-oncology drugs.

In Situ Hybridization (ISH) and Other Special Stains

In addition to a full immunohistochemical library of antibodies, we offer both ISH and special staining with core expertise in hematological tumors and common solid tumors.

This is a representative listing of available test offerings.
Interpace Pharma Solutions builds custom solutions to meet client specifications.
