W0.1

(W0.1) Give a general description of and introduction to your organization.

V.F. Corporation, founded in 1899, is one of the world’s largest apparel, footwear and accessories companies connecting people to the lifestyles, activities and experiences they cherish most through a family of iconic outdoor, active and workwear brands. Unless the context indicates otherwise, the terms “VF,” the “Company,” “we,” “us,” and “our” used herein refer to V.F. Corporation and its consolidated subsidiaries. Our largest brands are Vans®, The North Face®, Timberland® and Dickies®.

Unless otherwise noted, all information disclosed, including amounts and percentages, reflect the results of operations and financial condition of VF’s continuing operations. The Occupational Workwear business, sold on June 28, 2021, and the Jeans business, subject to the spin-off completed May 22, 2019, have been excluded. On December 28, 2020, VF acquired 100% of the outstanding shares of Supreme Holdings, Inc.

Our products are marketed to consumers through our wholesale channel, primarily in specialty stores, department stores, national chains, mass merchants, independently-operated partnership stores and with strategic digital partners. Our products are also marketed to consumers through our own direct-to-consumer operations, which include VF-operated stores, concession retail stores, brand e-commerce sites and other digital platforms. Revenues from the direct-to-consumer business represented 46% of VF’s total fiscal 2022 revenues. In addition to selling directly into international markets, many of our brands also sell products through licensees, agents and distributors. In fiscal 2022, VF derived 57% of its revenues from the Americas region, 29% from the Europe region and 14% from the Asia-Pacific region.

To provide diversified products across multiple channels of distribution in different geographic areas, we primarily rely on our global sourcing of finished goods from independent contractors. We utilize state-of-the-art supply chain technologies for inventory replenishment that enable us to effectively and efficiently get the right assortment of products that match consumer demand.

W1. Current state

W1.1

(W1.1) Rate the importance (current and future) of water quality and water quantity to the success of your business.

<table>
<thead>
<tr>
<th>Direct use importance rating</th>
<th>Indirect use importance rating</th>
<th>Please explain</th>
</tr>
</thead>
</table>
| Sufficient amounts of good quality freshwater available for use | Not very important | In our direct use, sufficient amounts of good quality freshwater available for use is not a very important input, as defined by CDP, for our direct business operations. This importance rating was chosen because the primary use of good quality freshwater in VF facilities (e.g., offices, retail, and distribution centers, etc.) is for water, sanitation, and hygiene (WASH) services. Access to sufficient amounts of good quality freshwater is still a local issue in some regions where we operate and is therefore, in this regard, important to VF; however, it is not a key component of our direct business operations. This importance rating for direct use is unlikely to change for VF’s existing facilities; however, future mergers and acquisitions may alter VF’s operational dependency on freshwater. In our indirect use, sufficient amounts of good quality freshwater available for use is a vital input, as defined by CDP, within the VF supply chain as access to good quality freshwater is a key component of growing raw materials and some supplier operations. This importance rating was chosen because the primary use of good quality freshwater in our indirect operations includes, cultivation of cotton crops, key supplier operations (e.g., dyeing), and worker health and sanitation. Lack of access to sufficient amounts of freshwater could compromise future production and possibly increase the cost of goods sold (COGS) for VF. The importance rating for indirect use is unlikely to change for VF’s existing business segments and product lines, however, future mergers and acquisitions may alter VF’s dependency on freshwater.

| Sufficient amounts of recycled, brackish and/or produced water available for use | Not important at all | In our direct use, the availability of recycled, brackish, and/or produced water is not important at all, as defined by CDP, for VF direct operations. This importance rating was chosen because following the successful spin-off of the Jeanswear business segment in 2019, recycled, brackish, and/or produced water is no longer used as an input in our direct operations. The importance rating for direct use is unlikely to change for VF’s existing owned-and-operated assets; however, future mergers and acquisitions may alter VF’s operational use of recycled, brackish, and/or produced water. In our indirect use, the availability of recycled, brackish, and/or produced water is neutral, as defined by CDP, for VF indirect operations. This importance rating was chosen because there is relatively small evidence of VF suppliers tracking the use of recycled or brackish water in the cultivation of cotton and/or the manufacturing of our products. The primary use of recycled, brackish, and/or produced water in our indirect operations is as an input in the manufacturing of products. This importance rating is unlikely to change for VF’s existing business segments and product lines, though as water becomes more costly, it is possible that recycled water will be used in our supply chain.

W1.3

(W1.3) Provide a figure for your organization’s total water withdrawal efficiency.

</thead>
<tbody>
<tr>
<td>Row 1</td>
<td>1184180 0000</td>
<td>&lt;Calculated field&gt;</td>
<td>As noted in W1.1, sufficient amounts of good quality freshwater available for use is not a key component of VF’s direct business operations (e.g., retail, offices, distribution centers, etc.), and therefore we do not publicly disclose water withdrawal trend figures.</td>
</tr>
</tbody>
</table>

W1.4

(W1.4) Do you engage with your value chain on water-related issues?

Yes, our suppliers
Yes, our customers or other value chain partners

W1.4a
(W1.4a) What proportion of suppliers do you request to report on their water use, risks and/or management information and what proportion of your procurement spend does this represent?

Row 1

% of suppliers by number
26-50

% of total procurement spend
76-100

Rationale for this coverage

Through the Higg Facility Environmental Module (FEM), VF collected data on water-related issues from more than 500 Tier 1 and Tier 2 suppliers in CY2021. Suppliers are requested to indicate sources of water supply and track water risk through WRI and WWF tools. The initial selection of suppliers to report through the Higg FEM was based on procurement spend and strategic importance to the company. VF has since developed internal goals to expand the amount of tier 1 and tier 2 suppliers, by procurement spend, that are completing the Higg FEM on an annual basis. Suppliers are incentivized to report through the incorporation of Higg FEM scores into procurement scorecards. For specific VF operating regions, suppliers are financially incentivized to complete the Higg FEM assessment as participation will increase suppliers’ performance on their VF procurement scorecard. Additionally, key in-scope suppliers using 50 cubic meters of process water or more per day fall within the scope of VF’s Global Wastewater Discharge Standards.

Impact of the engagement and measures of success

Through frequent supplier engagement, VF is able to measure success towards key internal and external targets with water data provided by suppliers through the Higg FEM. Surveyed suppliers are asked to report a variety of data points, including: facility-level water consumption, facility-level wastewater discharge, potential water-stress risks, and management processes on an annual basis. Higg FEM supplier scores, including water-related scores, are used by the VF supply chain sustainability team to track against internal Higg FEM performance goals and measure success. For example, in the CY2021 Higg FEM, verified VF suppliers achieved an average performance score of 66.8 for water and 59.72 for wastewater (out of 100). Additionally, supplier water data is used internally by the VF supply chain sustainability team to assess potential water-related environmental risks.

Comment

As noted in W0.2, the reporting scope of this disclosure is for FY2022 and data from FY2022 is provided when available, unless otherwise noted. Select data collected through external partnerships is available on a calendar year timeframe and is noted as such when disclosed.

(W1.4b) Provide details of any other water-related supplier engagement activity.

</thead>
</table>

Details of engagement

Inclusion of water stewardship and risk management in supplier selection mechanism

Requirement to adhere to our code of conduct regarding water stewardship and management

% of suppliers by number
76-100

% of total procurement spend
76-100

Rationale for the coverage of your engagement

VF supplier factories are audited on an annual basis against the VF Facility Guidelines by the VF Sustainable Operations team or accredited third parties. All VF authorized facilities must comply with all laws and regulations relating to environmental protection in the countries in which they operate. Facilities must have policies and procedures in place to ensure environmental impacts are minimized with respect to water and other significant environmental risks. Facilities are expected to make sustainable improvements in environmental performance and require the same of their suppliers and sub-contractors. Audits cover a variety of water-related issues, including for suppliers that discharge industrial wastewater, the confirmation that all wastewater (including domestic and process water) is treated before discharging into the natural environment. In FY2022, 84% of facilities were determined to be compliant with the VF Global Wastewater Discharge Standards.

Impact of the engagement and measures of success

An outcome of this engagement that is beneficial to VF is supplier compliance with the VF Facility Guidelines’ Environmental Principle, which consists of audit protocols to limit environmental degradation of local community waterways. Successful supplier engagement is defined as supplier awareness of our standards and compliance principles. Metrics used to measure successful engagement include the percentage of authorized facility audits completed annually and the percentage of facilities that are determined to be compliant with the VF Global Wastewater Discharge Standards, 84% in FY2022. An additional beneficial outcome of this engagement includes the risk mapping of wastewater discharge throughout our supply chain, which VF uses as advanced insights on the potential environmental impacts of our global supplier network.

Comment

As noted in W0.2, the reporting scope of this disclosure is for FY2022 and data from FY2022 is provided when available, unless otherwise noted. Select data collected through external partnerships is available on a calendar year timeframe and is noted as such when disclosed.

(W1.4c)
What is your organization’s rationale and strategy for prioritizing engagements with customers or other partners in its value chain?

VF recognizes we cannot achieve our goals alone and value our partnerships, collaboration and external engagement. At VF, we collaborate with relevant stakeholders in the creation and implementation of our strategies and programs. This includes regularly engaging with numerous external organizations to guide and support key aspects of our Made for Change strategy. In FY2021, VF completed a revision of its stakeholder engagement strategy to help proactively leverage the insights of external stakeholders and maximize their impact across the value chain and enterprise. Within our value chain, VF engages with suppliers, factory workers, customers, and retailers where there are opportunities for shared interest and a collaborative approach to driving more significant change. Successful engagements include partnerships that progress our goals and improve the natural environment. Company-specific examples of value chain engagement include: NGO partnerships (e.g. Clean by Design, etc.), customer-focused campaigns, and direct engagement with suppliers on water stewardship through the Higg FEM self-assessment. Company example: In FY2022, VF and its family of brands engaged with retailers through the Brand & Retail Module (BRM). The BRM was developed by the Sustainable Apparel Coalition (SAC) with the aim of helping brands and retailers comprehensively assess their sustainability risks and impacts and drive continuous improvements. To complete the BRM, VF engaged with and communicated results to retailers and success is measured by annual performance on BRM environment and social scores. All VF and brand submissions were verified by a third-party auditor. In FY2022, VF published the CY2021 BRM verified scores on www.vfc.com; VF brand performance on the environmental section, which assesses water use and discharge, ranged from 59% - 83%.

W2. Business impacts

W2.1

(W2.1) Has your organization experienced any detrimental water-related impacts?

---

(W3.3b)
(W3.3b) Describe your organization’s process for identifying, assessing, and responding to water-related risks within your direct operations and other stages of your value chain.

VF assesses current and future (>6 years) climate-related risks on its value chain. In general, these assessments occur every 6-12 months or more frequently. At a company-level, we identify and assess risks as part of strategy planning. Climate-related risks, are continually monitored and addressed through risk assessment processes embedded throughout the enterprise, including through our ERM, Strategy, Government Affairs and Global Sustainability & Responsibility teams. In FY2022, VF completed an enterprise-wide risk assessment in alignment with the TCFD framework where water related risks were considered.

Contextual Issues: When assessing water-related risks VF considers contextual issues, including water regulatory frameworks, status of ecosystems and habitats, and access to fully-functioning, safely managed WASH services for all employees. Water regulatory frameworks inform VF’s Global Water Discharge Standards, which all in-scope suppliers must comply with, and influence eco-efficient building updates within our direct operations. Access to fully-functioning, safely managed WASH services for all employees is also important, as outlined in our health and safety guidelines for employees, and access to WASH services in the supply chain is a key component of our Worker and Community Development (WCD) program. Lastly, the status of ecosystems and habitats and potential disruptions to ecosystems and habitats could have significant impacts on our business by increasing the cost of goods sold for water-dependent materials (e.g., cotton) or by increasing operations costs for suppliers with water-intensive operations, impacting VF’s strategy. Potential disruptions to ecosystems could also negatively impact operations as damage to ecosystems may increase the risk of damage to owned-and-operated assets during severe weather events.

Stakeholders Considered: VF also considers stakeholders such as customers, employees, investors, local communities, suppliers, regulators and NGOs when assessing water-related risks. Customers, employees and investors all expect VF to manage the impacts of our business on natural resources responsibly. In particular, customers are key to the long-term business growth and consumer insights identify water as a vulnerable natural resource. We also believe that responsible resource management is important for recruiting top talent and employee retention, therefore employees are always considered in our assessment. Additionally, investors are increasingly interested in VF’s ability to manage ESG risks, including natural resources, employees, and supply chain labor management. Therefore, investors are always deemed relevant and are included in our assessments. VF also considers the potential indirect impacts of our business on workers and local communities throughout our value chain. Therefore, we have established stringent global wastewater standards, in accordance with the Business for Social Responsibility (BSR) Water Quality Guidelines, to mitigate potential risks to employees, their families, and local communities and require facilities to comply with local environmental regulations. Suppliers are also important to VF since our global supply chain network consists of hundreds of authorized facilities, producing millions of products for VF brands each year, and suppliers can significantly impact water risk at the local level. In addition, VF regularly engages with a variety of environmental and social NGOs as part of our assessment to better understand NGO concerns, interests and expectations related to water in the apparel industry.

Application of Tools and Methods: Within this enterprise-level framework, water-related issues are integrated into several internal assessments across the company and outcomes are used to inform the internal decision-making process of identifying and responding to potential water-related risks. Examples of assessments and tools used include, but are not limited to, the following. Within our direct operations, VF identifies and assesses potential water-related risks for select sites through internal company-wide risk assessment systems and the use of WRI tools for select facilities on an annual basis. In FY2022, VF engaged with external consultants to complete an enterprise-wide risk assessment in alignment with the TCFD framework where water related risks were considered. Within indirect operations, VF requests key Tier 1 and Tier 2 suppliers to complete the Higg FEM self-assessment on an annual basis, which includes the use of WRI and WWF tools to assess geographic water-related risks. Water-related risks are also assessed for the full value chain for specific materials through using life cycle assessments and the VF WCD program utilizes internal company methods to assess access to WASH services in the supply chain.

W4. Risks and opportunities

W4.1

(W4.1) Have you identified any inherent water-related risks with the potential to have a substantive financial or strategic impact on your business?

Yes, only in our value chain beyond our direct operations

W4.1a

(W4.1a) How does your organization define substantive financial or strategic impact on your business?

Our definition of substantive financial risk, as it relates to any of the climate risks mentioned below, would be any impact with a likely probability in any given year affecting 1% of our revenue or 1% of our cost of goods sold (COGS) caused by physical climate risk, regulatory or reputational risk. Strategic risks include impacts that have a reputational impact to our brand(s), a lower probability threshold, and/or do not meet the financial threshold as defined above. The risks disclosed in this report meet the conditions for strategic risk but do not yet meet the threshold for substantive financial risk.

W4.1b

(W4.1b) What is the total number of facilities exposed to water risks with the potential to have a substantive financial or strategic impact on your business, and what proportion of your company-wide facilities does this represent?

</thead>
</table>

**Stage of value chain**
Supply chain

**Type of risk & Primary risk driver**
Reputation & markets
Increased stakeholder concern or negative stakeholder feedback

**Primary potential impact**
Company brand damage

**Company-specific description**
Increased impacts from water-related risks in VF’s supply chain could have a strategic impact on our business as negative stakeholder feedback may cause reputational damage to the company and our brands. Examples of these risks could include environmental degradation from the discharge of untreated industrial wastewater and/or reduced access to potable water in the surrounding communities due to industrial wastewater pollution. In CY2021, VF assessed water stress for key suppliers and determined that over 200 are located in extremely high-to-high at-risk locations. Countries with the most suppliers in extremely high-to-high at-risk locations included Vietnam (13%), China (8%), Bangladesh (5%), and India (5%). The primary potential impact of increased stakeholder concern or negative stakeholder feedback in our supply chain is company brand damage.

**Timeframe**
4-6 years

**Magnitude of potential impact**
Medium-low

**Likelihood**
About as likely as not

Are you able to provide a potential financial impact figure?
No, we do not have this figure

Potential financial impact figure (currency)
<Not Applicable>

Potential financial impact figure - minimum (currency)
<Not Applicable>

Potential financial impact figure - maximum (currency)
<Not Applicable>

**Explanation of financial impact**
We do not have a figure at this time.

**Primary response to risk**
Supplier engagement
Promote greater due diligence among suppliers

**Description of response**
Through the Higg FEM, VF requests key Tier 1 and Tier 2 suppliers to report on water use and industrial wastewater discharge on an annual basis. This process promotes increased due diligence and reporting on water issues within the VF supply chain. Through the Higg FEM, suppliers are requested to track water withdrawal and wastewater discharge data, assess the current water stress of their operating region, develop targets for water reduction and action plans focused on achieving water reduction targets. In an effort to increase responsible natural resource management within our supply chain, VF provides Higg FEM training to suppliers around the globe, which includes training on the water components of the Higg FEM. Since 2018, the VF supply chain sustainability team has trained over 1,000 factory representatives, across nearly 400 supplier facilities, on the implementation of environmental best practices for manufacturing.

**Cost of response**
60000

**Explanation of cost of response**
VF annual membership with the Sustainable Apparel Coalition (SAC), sixty-thousand dollars, includes access to the Higg FEM which is used to both assess and mitigate water-related risks within our supply chain on an annual basis.

---

(W4.2b) Why does your organization not consider itself exposed to water risks in its direct operations with the potential to have a substantive financial or strategic impact?

<table>
<thead>
<tr>
<th>Primary reason</th>
<th>Please explain</th>
</tr>
</thead>
<tbody>
<tr>
<td>Risks exist, but no substantive impact anticipated</td>
<td>Climate-related risks, are continually monitored and addressed through risk assessment processes embedded throughout the enterprise, including through our ERM, Strategy, Government Affairs and Global Sustainability &amp; Responsibility teams. The outcomes of these risk assessments have not identified water as having a substantive financial or strategic impact on direct operations.</td>
</tr>
</tbody>
</table>
(W4.3) Have you identified any water-related opportunities with the potential to have a substantive financial or strategic impact on your business?

Yes, we have identified opportunities, and some/all are being realized

(W4.3a) Provide details of opportunities currently being realized that could have a substantive financial or strategic impact on your business.

**Type of opportunity**
Efficiency

**Primary water-related opportunity**
Improved water efficiency in operations

**Company-specific description & strategy to realize opportunity**
During FY2022, VF sourced products from contracted manufacturing facilities across the globe. A full list of VF manufacturing locations, updated on a quarterly basis, can be found on the VF website. The majority of our product’s environmental impacts occur within our supply chain, where there are many opportunities to gain efficiencies, which may result in cost savings that could be passed on to VF. For example, through a partnership with the Apparel Impact Institute’s Clean by Design initiative, a Tier 2 supplier in Taiwan for a VF brand worked to achieve energy, water, and financial savings through efficiency programs. The project was implemented during CY2019 to CY2021, with the following energy efficiency achievements: a total reduction of 9,152,496 MJ of energy, 37,953 m3 of water savings (per year), 1,027 GHG MT (per year), and $356,413 (USD) of savings.

**Estimated timeframe for realization**
4 to 6 years

**Magnitude of potential financial impact**
Low-medium

**Are you able to provide a potential financial impact figure?**
Yes, a single figure estimate

**Potential financial impact figure (currency)**
650000

**Potential financial impact figure – minimum (currency)**
<Not Applicable>

**Potential financial impact figure – maximum (currency)**
<Not Applicable>

**Explanation of financial impact**
The potential financial impact to VF is calculated through supply chain energy efficiency programs, CY2019 – CY2021, with the Apparel Impact Institute. Every year VF partners with multiple agencies including IFC, GIZ, Apparel Impact Institute, and others. Through these partnerships, participating suppliers are requested to report on annual financial savings that are associated with environment efficiency initiatives that they have implemented through the program. To reach this potential financial impact, reported savings from each facility (ranging from $500 - $800,000 depending on the factory) were summed together. While it is not possible to determine if all these savings would be passed on to VF, this number is indicative of the energy savings possible by partnerships with suppliers. Potential financial impact calculation: Average savings based on $500-800 range ($650) * 1,000 facilities surveyed = $650,000. The VF Responsible Sourcing team and Supply Chain Sustainability team partner with participating suppliers to adopt a more integrated approach to the responsible use of water, chemicals and energy. We collaborate with select suppliers to assist in the installation of energy efficient technologies in their facilities, and we work with others to embed an energy conservation mindset through continuous training programs and other educational resources. We are active participants in the Sustainable Apparel Coalition (SAC) and request key Tier 1 and Tier 2 suppliers to report their energy impacts through the Higg FEM Index. During CY2021, over 500 Tier 1 and Tier 2 VF suppliers completed the Higg FEM assessment.

(W6.1) Does your organization have a water policy?

Yes, we have a documented water policy that is publicly available

</tr>
<tr>
<td>Row 1</td>
<td>In FY2021, VF’s extended supply chain used approximately 160 million m3 of water. Our most significant water impacts are in our supply chain, including cotton cultivation, leather production and water use by dye houses. VF’s Global Wastewater Discharge Standards, in alignment with the Business for Social Responsibility (BSR) standards, commits to the long-term health of the planet and people, now and for future generations and acknowledges the important role which water plays. All vendors are subject to our compliance audit program and are required to comply with the Standard if using 50 cubic meters per day or more of process water. When an audit is being completed, VF looks to determine whether local water regulations are followed, wastewater analysis by a certified third-party laboratory are completed, and all reports are submitted every six months to VF. In the case that the water standards are not met, they are then placed on a Corrective Action Plan. The target testing parameters set forth for suppliers can be found on page five of the Standards and all sites are required to have a domestic sewage treatment and must not discharge any untreated water directly into the local waterways. VF strives to achieve a target of 100% compliance with all global supplier policies on an annual basis. Progress against these targets are communicated in VF’s public sustainability and responsibility disclosures, including water-related compliance. In FY2022, 84% of VF’s in-scope suppliers were found to be compliant with the VF Global Wastewater Discharge Standards. Additionally, VF Corporation’s Human Rights Commitment, a public company-wide policy, acknowledges water as a human right and is committed to ensuring access to clean water throughout our supply chain, including returning clean water into the communities and villages where our production takes place.</td>

W6.3

(W6.3) Provide the highest management-level position(s) or committee(s) with responsibility for water-related issues (do not include the names of individuals).

Name of the position(s) and/or committee(s)
President

Responsibility
Assessing water-related risks and opportunities
Managing water-related risks and opportunities

Frequency of reporting to the board on water-related issues
Half-yearly

Please explain
The VP of Global Sustainability, Responsibility and Trade (VP) at VF oversees Product Stewardship, Responsible Sourcing & Environmental Sustainability across our value chain. The VP reports to VF’s Executive VP of Supply Chain, a member of the ELT. The VP also presents to the Governance and Corporate Responsibility Committee of the Board of Directors on topics, including water risk and wastewater management in the supply chain biannually. Sustainability is embedded within the business function of supply chain because this part of our value chain presents the greatest risk for climate-related impact and opportunity for risk mitigation. The materials used in VF’s products, and the manufacturing and finishing of products in contracted facilities represent many climate-related impacts, including water-related risks. In FY2022, a water-related responsibility of this individual included the approval of a water risk assessment in VF’s extended supply chain to be carried out in FY2023.

W6.4

(W6.4) Do you provide incentives to C-suite employees or board members for the management of water-related issues?

<table>
<thead>
<tr>

W6.5

(W6.5) Do you engage in activities that could either directly or indirectly influence public policy on water through any of the following?

Yes, direct engagement with policy makers
Yes, trade associations

W6.5a

(W6.5a) What processes do you have in place to ensure that all of your direct and indirect activities seeking to influence policy are consistent with your water policy/water commitments?

VF senior leadership is engaged and supportive of our Climate Change policy engagement. VF’s Global Sustainability & Responsibility team coordinates efforts with our Corporate Communications and Government Affairs teams and other key stakeholders before engaging. Therefore, any participation is evaluated for alignment and support of VF’s own internal position regarding climate change and our understanding of risks and opportunities defined by our climate change strategy. If a particular engagement poses a potential conflict with our internal position, VF will address the engagement opportunity on a case-by-case basis engaging with Corporate Communications, Government Affairs, and Sustainability functions, and the engagement is ultimately approved by the Executive Leadership Team.

W6.6

(W6.6) Did your organization include information about its response to water-related risks in its most recent mainstream financial report?

No, and we have no plans to do so
(W7.1) Are water-related issues integrated into any aspects of your long-term strategic business plan, and if so how?

<table>
<thead>
<tr>
<th>Are water-related issues integrated?</th>
<th>Long-term time horizon (years)</th>
<th>Please explain</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes, water-related issues are integrated</td>
<td>11-15</td>
<td>Good quality freshwater availability is integrated into our long-term objectives. Significant changes in water availability and water-related naturally occurring events (e.g., drought) could have a strategic impact on the company’s ability to source key raw material commodities at a stable price, such as cotton. Therefore, the Global Sustainability &amp; Responsibility team within VF’s supply chain department closely monitors and assesses potential risks, such as reduced water availability, that may impact the company’s long-term business objectives. One of the strategic pillars of VF’s new environmental sustainability strategy is sustainable materials, which aligns with VF’s long-term materials vision that our top nine materials will originate from regenerative, responsibly sourced renewable, or recycled sources by 2030. This goal supports the achievement of our long-term business objectives by incentivizing the use of sustainable growing methods which are intended to reduce water stress in key sourcing regions. An example of how water-related issues have been integrated into the business strategy: In FY2022 the VF Board of Directors requested the completion of a water risk assessment in the supply chain to assess long-term supply chain resilience. The assessment will identify potential material water-related risks for the company, enabling VF to effectively manage water resources in the long-term.</td>
</tr>

**W7.4**

(W7.4) Does your company use an internal price on water?

**Row 1**

Does your company use an internal price on water?  
No, but we are currently exploring water valuation practices

**Please explain**

In FY2021, VF engaged with a credible NGO in the field of water stewardship to conduct a water risk analysis in key sourcing regions. A key expected outcome of this analysis is the identification of a financial value for water.

**W7.5**

(W7.5) Do you classify any of your current products and/or services as low water impact?

<table>

</tr>
</tbody>
</table>

**W8.1a**
(W8.1a) Provide details of your water targets that are monitored at the corporate level, and the progress made.

**Target reference number**
Target 1

**Category of target**
Product water intensity

**Level**
Company-wide

**Primary motivation**
Reduced environmental impact

**Description of target**
VF has set a company-wide target that all cotton purchased by VF that is not from the U.S. or Australia is grown under a cotton growing sustainability scheme by FY2026 to manage environmental impacts including water intensity.

**Quantitative metric**
Other, please specify (% of cotton sourced from the U.S. or Australia or was grown under a sustainability scheme.)

**Baseline year**
2016

**Start year**
2017

**Target year**
2026

**% of target achieved**
75

**Please explain**
Cotton is a significant raw material input for VF brand products and is a highly resource dependent crop that is likely to be impacted by chronic physical risks such as drought. Fluctuations in the price, availability and quality of cotton fabrics used by VF in its manufactured products, or of purchased finished goods, could have an adverse effect on VF’s cost of goods sold or its ability to meet its customers’ demands. Therefore, VF is dedicated to mitigating our risk associated with the potential fluctuation of cotton pricing by supporting sustainable cotton growing methods and committing to increasing the procurement of sustainably sourced raw materials. In FY2021, VF sourced cotton from the Better Cotton Initiative, US Cotton Trust Protocol and other sustainable cotton growing schemes, including organically grown cotton.

(W8.1b) Provide details of your water goal(s) that are monitored at the corporate level and the progress made.

**Goal**
Providing access to safely managed Water, Sanitation and Hygiene (WASH) in local communities

**Level**
Business activity

**Motivation**
Increase freshwater availability for users/natural environment within the basin

**Description of goal**
The VF Worker and Community Development (WCD) program has set an ambitious goal to improve the lives of two million workers in our supply chain by FY2031. Through needs-based assessments, VF’s WCD program determined three community development impact areas, one of which is access to water, sanitation, and hygiene (WASH) services. This goal is important to VF because it aligns with our business purpose to power movement of sustainable and active lifestyles for the betterment of people and our planet. The goal is being implemented by the WCD team, which is a part of the VF Responsible Sourcing department, through strategic partnerships with local and international development organizations.

**Baseline year**
2016

**Start year**
2017

**End year**
2031

**Progress**
Since 2017, the VF WCD team has engaged with local partners to support the implementation of programs in Bangladesh, Cambodia, India, the Dominican Republic, Vietnam, China, Kenya, Lesotho and others to reach over 300,000 people. As of FY2021, Water and Sanitation-related WCD programs have reached over 160,000 facility workers and community members. The indicator used to assess progress towards this goal is the number of individuals reached through WCD programs, on an annual basis, and the assigned threshold of success is 2 million workers.
Do you verify any other water information reported in your CDP disclosure (not already covered by W5.1a)?

No, we do not currently verify any other water information reported in our CDP disclosure
